

bassRESTOR

Bass Restoration Processor / LOC / Line Driver

Complete Tuning Control • Auto Turn-On • Multi-Function Remote

Fully Adjustable Processing

Some music simply lacks enough low bass content to satisfy even with lots of EQ. The bassRESTOR processes music in real time to restore deep bass, providing top panel variable adjustments for all effect parameters, gain and a subsonic filter to unleash subwoofer performance while keeping excursion in check.

Multi-Function Remote

With its dual-concentric knob, the included remote provides independent control over bass restoration effect or defeat with a press and total output level to easily optimize any music to match your sound system and personal listening taste.

Line Output Converter or Line Driver

The bassRESTOR is capable of producing over 10Vrms output at less than 50Ω, providing plenty of clean signal to drive any amplifier system to full output with maximum sound quality from any speaker level or RCA source.

2-Channel Bass Restoration Processor • Line Output Converter or Line Driver • Multi-Function Remote
Variable Subsonic Filter • Variable Gain w/Clip LED • Differential Balanced Inputs • Low Impedance Outputs
Auto Turn-On via DC-Offset or Audio Detect • Generated +12V Remote Output • OEM Load Detect Compatible
