

link4

4-Channel Line Output Converter

Summing • AUX Input • Multi-Function Remote

Advanced Summing LOC

When it comes to summing a factory 2-way system to achieve a full-range signal or simply preserving front/rear fading, the link4 is the most flexible 4-channel LOC available today. It can retain independent sub level control while summing, but also provides an AUX input for adding another line level source with its own volume and sub level control.

Multi-Function Remote

For even more flexibility, the link4's patent pending remote provides four knob configurations for different system types, set directly from the remote. Whether it's sub level only for a speaker level source, a stand-alone AUX system or even master volume control with independent sub level, the link4's multi-function remote delivers advanced functionality with simple operation.

High Performance OEM Integration

With built-in loading for OEM load detect systems and ability to accept high voltage factory amp signals up to 40Vrms, the link4 provides unparalleled vehicle coverage. It is also capable of producing over 10Vrms output at less than 50Ω, more than enough to drive any aftermarket amplifier system to full output with maximum performance.

4-Channel Line Output Converter & Summing Processor • AUX Input • Multi-Function Remote
4ch/2ch Input Select • Remote Master Volume w/Independent Sub Level Control • Variable Gains w/Clip LEDs
Differential Balanced Inputs • Low Impedance Outputs • Auto Turn-On via DC-Offset or Audio Detect
Generated +12V Remote Output • OEM Load Detect Compatible • Selectable Ground Isolation
Locking Detachable Terminals • Panel Mount RCA Jacks • Compact Aluminum Chassis w/Detachable Mounting Tabs
