

PL2

SOWDEN has focused on improving the performance and life span of the battery-powered light, widely used for indoor and outdoor home use, but also suitable for restaurant tables and bar counters where mains power is impractical.

PL2 is fitted with the custom-designed SOWDEN LED DISC light source, which has an integrated touch-sensitive dimmer control and a unique screw-in fitting that allows it to be easily replaced if necessary.

PL2 contains two 2600mAh / 18650 lithium-ion rechargeable batteries and rather than only relying on lengthy recharging in the lamp, they can be quickly changed with fully charged replacements, permitting immediate use. In restaurants, for example, replacement batteries can be charged in an external battery charger and swapped during service without leaving guests in the dark. It also means that restaurant owners will not have the tiresome job of remembering to connect lights for recharging every day.

For home use, you can still recharge with the supplied USB connector when required.

Light time from fully charged batteries

Maximum light – 9 hours

Minimum light – 24+ hours

Material: ABS, silicone, aluminium

INPUT: DC 5 V, 1.0 A

Li-Ion: 2x Li-ion 3.7V, 2600mAh

LAMP TYPE: 3W LED
