FYTA pH Test Kit -Parts

1. pH strip with color guide
2. Bottle with distilled water and dropper
3. Test tube

What else you need:

4. Spoon with a flat handle

Conduct pH test

1. Fill the test tube to one third with soil (use the handle of the spoon).
2. Fill the test tube with another third of distilled water.
3. Shake the test tube for 30 sec. to mix the water with the soil.
4. Wait 15 -20 min. until the soil settles.
5. Take 1 pH strip and dip it into the test tube for 5-10 sec.
6. Compare the pH strip with the color guide.

Optional

7. Enter the result into the FYTA app. [Download the app](#) ↗ ( + ).
8. Get instructions on what to do if the soil is too acidic or too alkaline.
