## DIRECTIONS FOR USE

1 Wash hands first. Sterilise bottle and teat in boiling water or a steriliser.

2 Potable, previously boiled water should be used. Pour the required amount of cooled boiled water into the bottle.

3 Add the required number of softly packed level scoops according to the feeding guide, using the provided scoop and the built-in leveller on the Can. Always add 1 scoop of powder for each 60mL of water.

4 Shake well until powder is dissolved. Test temperature on your wrist before feeding. It should feel lukewarm, not hot. Once prepared, serve immediately.

Each bottle should be prepared individually. If a bottle of made up formula is to be stored prior to use, it must be refrigerated and used within 24 hours. Formula left in the bottle after a feed must be discarded.
