CONTROL LINE 10 cm

RING MEASURING TAPE TO CUT OUT

With this ring measuring tape you can determine your ring size!

This is how the measuring tape works:

1. Print this page in DIN A4 format. Make sure that the print settings are scaled to 100%.
2. Measure the control line on the top of the printed paper with a ruler. If it is not 10 cm, your printer settings are not correct!
3. Cut out the measuring tape on the striped line. Use a knife to cut the slit at the upper marking.
4. Now you can wrap the tape like a belt around your finger and pass the end through the slit.
5. Adjust the width until the measuring tape comfortably fits your finger. Then read off the ring width, which is marked by the triangle, to determine your ring size.
