

# CASE STUDY

“

Safety doesn't happen by accident and in my opinion, you have to work at keeping it fresh to avoid complacency.

I'm loving our new flash up signs in my Wincanton for Sainsburys Argos site, here in Kettering.

PRESENTED BY:

**PROBLEM:**

Wincanton are always looking for more effective ways to ensure warehouse personnel safety, to increase the awareness of their material handling equipment. Personnel safety is a crucial aspect of the day-to-day operation of a warehouse, and any collision between pedestrians and MHE has a high risk of serious injury. Wincanton felt it was crucial to be proactive and implement new ways to increase personnel awareness of the environment they are about to enter.

**SOLUTION:**

As the novelty of traditional warning signs and markings can wear off, a more permanent and interactive feature was chosen to refresh personnel's importance on their awareness of material handling equipment in the warehouse. A projected safety marking was installed on a walkway leading out to the warehouse, linked to a motion sensor, allowing anyone traveling into the warehouse a clear reminder of the risks in the area and how to properly act.

**RESULT:**

The projected markings were an excellent implementation to increase the awareness of material handling equipment, personnel are clearly reminded of the actions to avoid injury in a warehouse environment. The projection is clear and bright and impossible to miss, it captures your attention immediately. The projection will always be visible when activated by the motion sensor and will not be damaged over time like traditional floor warning markings. The projector can be re positioned as needed and the bulb has an excellent 5-year life.

**SYSTEMS USED:**

**Signum 75W LED Gobo Projector**

The Signum is a powerful compact LED projector designed specifically to project safety signs in harsh industrial environments. IP65 and the absence of cooling fans make it perfect for dusty places. With an average LED life of 50,000 hours, it guarantees prolonged usage.

**BENEFITS:**

- Uses interchangeable projection Gobos.
- IP65 protection rating.
- Repositionable projection angle.
- Economic LED bulb.
