

# KANE GAS ANALYZER SERVICE and CALIBRATION

The unit is designed to perform a calibration check and automatic zero procedure at pre-determined times to insure accuracy. During the annual calibration performed at an approved service center, all components are tested and adjusted to ensure that flow rates and sensors have the proper settings to allow this procedure to take place. As certain sensors age, the service center can make adjustments to bring those sensors back into the center of the calibration range, often extending their useful life and accuracy.

The calibration service will include calibration of the instrument, filter and pump change as required with a filter pack and return shipping.

The full service will include replacement O2 sensor, NO sensor, filter, batteries and pump as required along with a filter pack and return shipping.

## Pricing:

AUTO4-2	Calibration Service	179.00
	Full Service	369.00
AUTO5-2	Calibration Service	179.00
	Full Service	659.00
AUTOplus5	Calibration Service	149.00
	Full Service	479.00

Excludes parts damaged due to physical damage or abuse as described in the Limited Express Warranty statement.
