

Freeze Dried Organic Beef Pancreas

100% AUSTRALIAN GRASS FED AND FINISHED

100% natural
and organic

Superior
bioavailability

Third party
tested for purity

Hormone, antibiotic
and GMO free

Traditional cultures and early ancestral healers believed that eating the organs from a healthy animal would strengthen and support the health of the corresponding organ of the individual. The digestive benefits of pancreas may be partly attributable to this principle called 'like-supports-like'.

Organic Beef Pancreas is a rich source of:

- Proteins exclusively found and expressed in pancreatic tissue.
- Key pancreatic enzymes required to break down fats (lipase), proteins (proteases) and carbohydrates (amylase).
- Pancreatic peptides (colipse and trypsin) needed to activate proteolytic enzymes.

Organic Beef Pancreas may help to improve:

- Impaired digestion
- Malabsorption states
- Nutrient deficiencies
- Abdominal discomfort

Not all organs are the same, which is why it's so important to look for the highest quality when it comes to what we feed our dogs. For optimal nutrition, organs should come from pasture-raised, grass-fed cows that are hormone, pesticide and GMO free, be freeze-dried using cold processing technology to retain maximum nutrient levels, and contain no binders, fillers or flow agents.
