Maintenance:

Your pump type soap dispenser is designed to pump a variety of soap. Lower viscosity soap (thinner soap) will generally be easier to pump than higher viscosity soap (thicker soap). Please make sure that your soap dose not contain high doses of Alkaline and similar chemicals that may be harmful to working components that are present inside soap dispenser, and to dispenser finish. If your soap dispenser stops functioning or functions poorly, it may become necessary to soak your soap pump assembly in hot water for 1/2 hour to dissolve clots.
