AIRTEX FUEL PUMPS ARE TOTALLY O.E.

◆ Same Impeller Design

◆ Same Fuel-Delivery Capacity

◆ Same Motor Size

10 Reasons to Install Airtex Fuel Pumps

- 1** • The same design specified by original equipment manufacturer (O.E.)
- 2** • Performance tested to perform in most fuel blends.
- 3** • Large armature bearing surfaces.
- 4** • Metal inlet and outlet plates in pumping mechanism.
- 5** • Armature is balanced for longer life and quieter operation.
- 6** • Radio frequency filter used to eliminate buzzing in radio and car phone.
- 7** • Original equipment connecting terminals where possible. Intank pumps are complete with filter strainer supplied.
- 8** • Brush wire ends are soldered for secure connections.
- 9** • Check valve is brass bullet type with viton tip or steel ball on viton seat to minimise noise.
- 10** • All pumps test flowed after final assembly.

WARRANTY POLICY AND CONDITIONS OF SALE

Most intank EFI pumps are supplied with a primary strainer. The purpose of the primary strainer is to prevent tank contaminants entering and subsequently damaging the EFI pump. Failure to fit the supplied strainer will void any warranty claim. Please refer to page 5 for installation guidelines.

Standard EFI pumps are warranted against faulty materials and workmanship when used for their designated purpose and for a period of two years or 40,000km from date of fitment, whichever occurs first.

Non automotive applications, high performance and race car pumps such as **EP6906, EP6907, EP6966** are warranted for a period of 12 months or 20,000km from date of fitment, whichever occurs first.

Claims must be submitted in writing accompanied by the alleged faulty pump complete with strainer, proof of purchase and the following details:

1. Vehicle type
2. Fuel used i.e. 91 Octane, 96 Octane, LPG or CNG
3. Fitment date
4. Failure date
5. Kilometres travelled since date of fitment
6. Vehicle usage i.e. private, business, racing, marine

CDL Autoparts are the only automotive company in New Zealand to possess a factory approved EFI pump test rig for measuring flow and pressure. All pumps returned will be thoroughly inspected and tested, if any of the following are apparent the claim will be declined.

1. Fuel contamination
2. Use of alcohol fuel
3. Excessive use of intank fuel additives
4. Damage from unprofessional installation
5. Pump fitted to a dual fuel system and run dry

In the event of any disputes the pump will be returned to the manufacturer for evaluation, their decision will be final.

CDL Autoparts Ltd and their suppliers are the sole adjudicators on warranty claims, placement of an order is deemed to be acceptance of the conditions of sale and warranty.

Credits: Credit of items supplied as ordered by the customer will be at the discretion of CDL Autoparts Ltd.

Freight: Freight charges on returned goods will be borne by the customer and will be considered upon finalisation of the claim.

New Zealand Consumer Guarantees Act 1993:

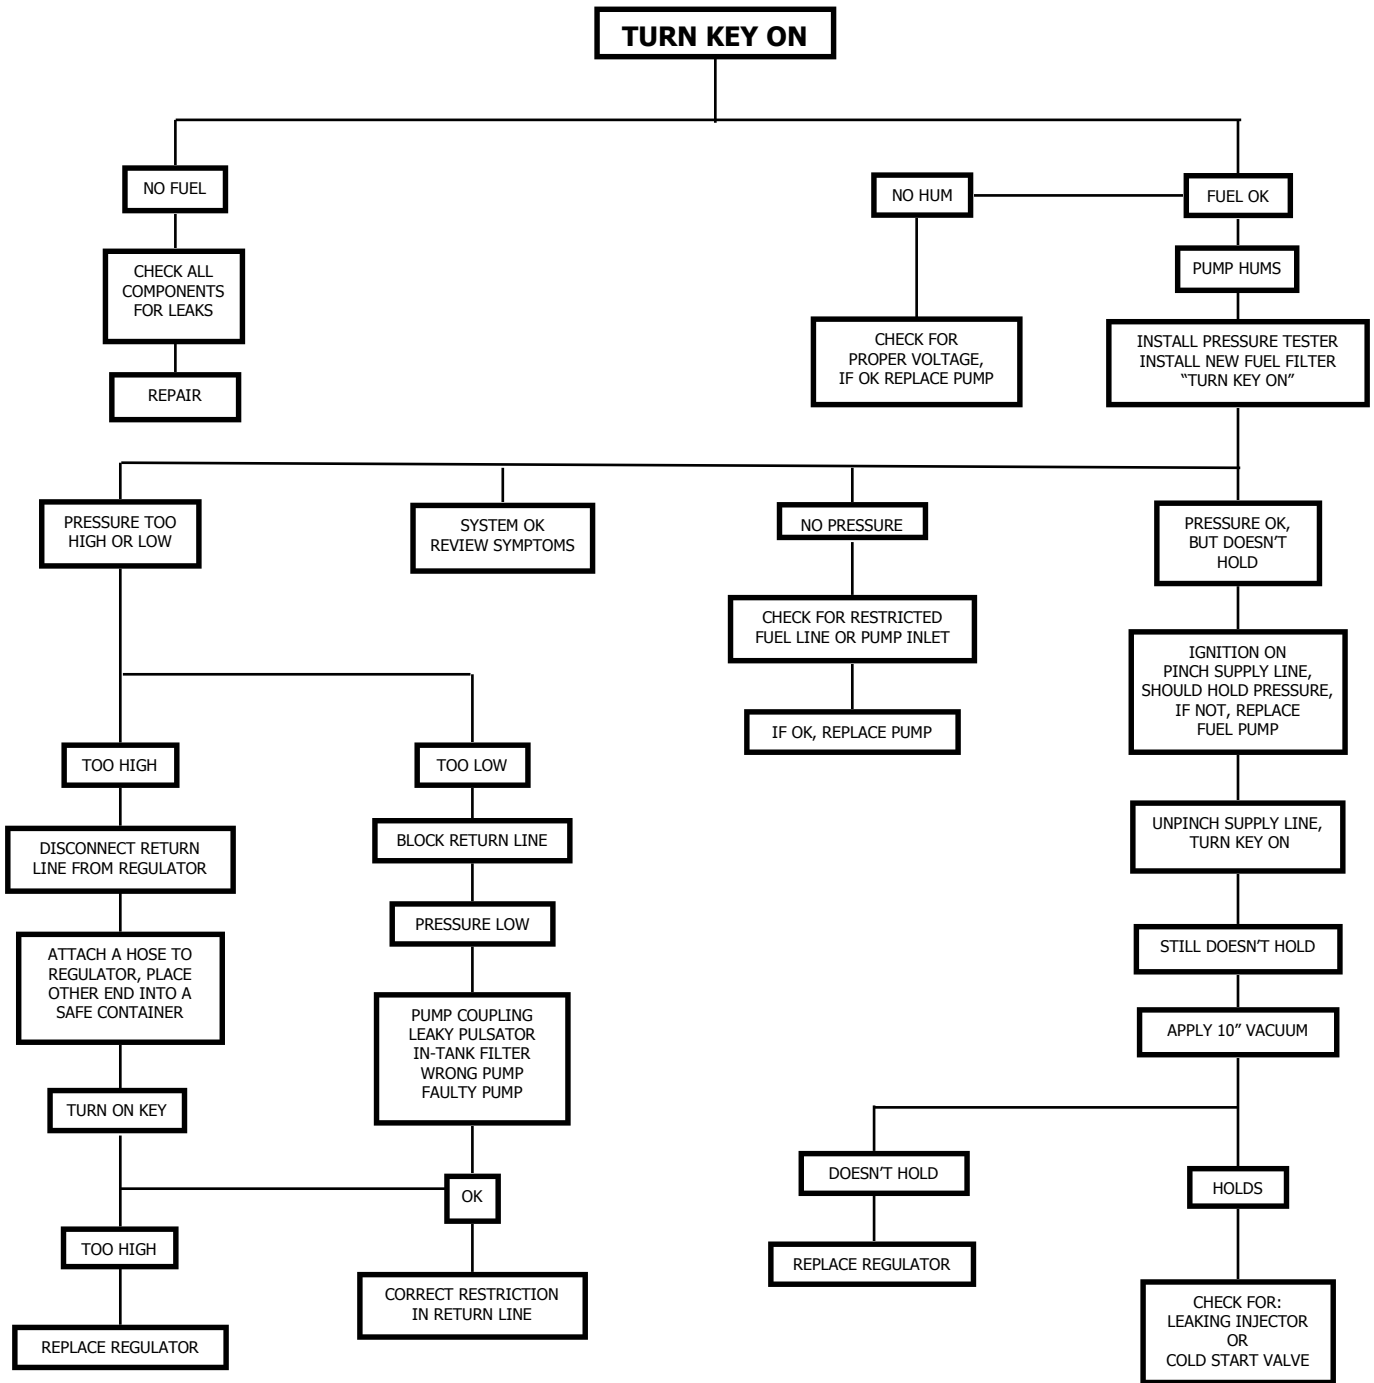

Where the customer is a business as defined by the Act, the Consumer Guarantees Act 1993 does not apply.

Disclaimer: All care has been exercised in the research and production of this catalogue. This catalogue is designed to primarily suit the New Zealand new vehicle market. Used import vehicle applications can vary from New Zealand New specifications, therefore, due to vehicle production changes and supersessions no responsibility is accepted by CDL Autoparts Ltd for the accuracy of any information contained herein.

EFI FUEL PUMP DIAGNOSTICS

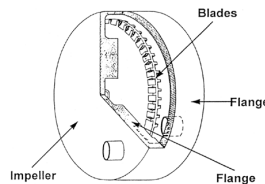

3 Common Styles of EFI Pump Elements

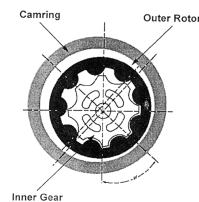

Roller Cell

Turbine

Gerotor

GENERAL INSTALLATION INSTRUCTIONS

INTANK APPLICATIONS - NEVER RUN PUMP DRY

1. Switch off power source to fuel pump.
2. Ensure fuel tank is close to empty, remove pump or pump sender assembly.
3. Remove fuel pump from hanger.
4. Check tank for contaminants, if any water or dirt is evident, remove tank and thoroughly clean.

Note: If the tank is badly contaminated, there is a strong possibility the fuel rail could also be contaminated and the injectors clogged.

5. Observe fitting instruction supplied with pump and fit to hanger using a new strainer.
6. Replace flange gasket, seal screws and tighten hanger flange to tank.
7. Replace inline fuel filter
8. Check system for leaks.

It is very important to replace the strainer (used) and the EFI filter when installing a new pump; failure to do so could void the manufacturers warranty.

EXTERNAL INLINE APPLICATIONS - NEVER RUN PUMP DRY

1. Switch off power source to fuel pump.
2. Ensure fuel tank is close to empty.
3. Clamp off fuel inlet line to pump, remove pump.
4. Check tank for contaminants, if any water or dirt is evident, remove tank and thoroughly clean.

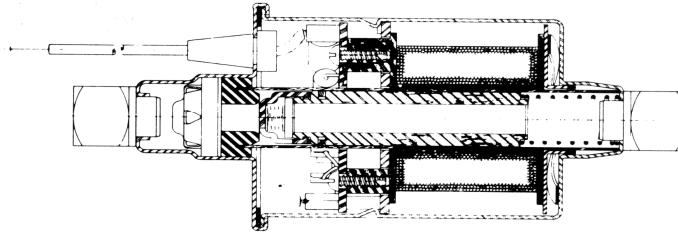

Note: If the tank is badly contaminated, there is a strong possibility the fuel rail could also be contaminated and the injectors clogged.

5. Observe fitting instructions supplied with pump and fit to fuel line.
6. Replace inline EFI fuel filter.
7. Check system for leaks.

It is very important to replace the strainer (used) and the EFI filter when installing a new pump; failure to do so could void the manufacturers warranty.

UNIVERSAL LOW PRESSURE ELECTRIC FUEL PUMPS

New universal solid state electric fuel pump features advanced technology.

Exclusive design provides increased vapour handling capacity. Solid state engineering has no electric contact points to wear out and it is highly resistant to voltage spikes, even reversed polarity. Permanently sealed construction with no screws to loosen or leak. Impervious to corrosion from alcohol blended fuels. Pump is filled with epoxy for maximum heat dissipation and increased protection from vibration.

Our pump is virtually indestructible!

AIRTEX SOLENOID STYLE SOLID STATE PUMPS ARE PUSH TYPE PUMPS AND WILL ONLY REACH THEIR PEAK PERFORMANCE IF MOUNTED AS CLOSE TO THE FUEL TANK AS POSSIBLE.

- | | |
|------------------|--|
| EP4006 | 24 volt, 10mm inlet-outlet with fitting kit, ideal for diesel lift pump, 6-10psi. |
| EP4010 | 24 volt, 10mm inlet-outlet with fitting kit, ideal for diesel lift pump, 10-14psi. |
| EP8011 | 6 volt, 8mm inlet-outlet with fitting kit and filter supplied. <u>Negative earth only.</u> |
| EP8012 | 12 volt, 8mm inlet-outlet with fitting kit and filter supplied, 5-9psi. |
| EP8012-38 | 12 volt, 10mm inlet-outlet with fitting kit, 9psi. Ideal for V8 applications. |
| EP8016 | 12 volt, 8mm inlet-outlet with fitting kit and filter supplied, 2.5-4psi. |
| EP8090 | 12 volt, 10mm inlet-outlet with fitting kit, 5-9psi. Heavy duty. |
| EP8153 | 12 volt, 1/4 x 18 npt inlet-outlet with fitting kit, 10-14psi. |

HIGH PERFORMANCE ROTARY SOLID DISPLACEMENT PUMPS

- | | |
|-----------------|---|
| EP84070 | 12 volt, rotary inline pump, 4-6psi, 72gph. |
| EP84389 | 12v rotary inline pump, 5-7psi, 72gph, marine application. |
| EP8845DC | 12v roller rotary inline diesel pump, 24psi, 275L/hr, open flow, carbon commutator. |

HIGH PERFORMANCE ELECTRIC FUEL PUMP FEATURES

EP6906*

EFI pump universal external inline mounting rollervane pump for high performance MPI systems. Maximum open flow 150 litres per hour. Maximum shut down pressure 8-8.5 bar, screw terminals, 8mm inlet and outlet pipes, no primary strainer supplied. Mounting brackets and hardware included, designed for leaded, unleaded or fuel blend type fuels.

EP6907*

EFI pump universal external inline mounting rollervane pump for high performance MPI systems. Maximum open flow 250-280 litres per hour. Maximum shut down pressure 7.5-8.2 bar, screw terminals, 10mm inlet and outlet pipes, no primary strainer supplied. Mounting brackets and hardware included, designed for leaded, unleaded or fuel blend type fuels.

Suitable for Hi-performance jet boat and car racing applications.

EP6966*

EFI pump universal intank mounting, 51mm body, turbine style for high performance MPI systems. Maximum open flow 340 litres per hour, maximum shutdown pressure 8.5 bar, screw terminals, 8mm outlet pipe, primary strainer included. Will supply 450 BHP at 4 bar.

Suitable for Mazda Rotary racing applications.

****Warranty period on high performance pumps - 12 months or 20,000km***

WARNING NOTE:

Twin Turbo Subaru applications require a special high performance EFI pump; part number EP6982.

Although EP6917 and EP6920 are similar in appearance their output and pressure is considerably less and could be detrimental to engine performance and life expectancy. EP6920 has higher output pressure than EP6917. We recommend EP6917 be fitted to non turbo applications to retain OE fuel consumption.

As a guide, CDL Autoparts recommend the following:

- EP6917 suits non turbo vehicles
- EP6920 suits single turbo vehicles
- EP6982 suits twin turbo vehicles

Other manufacturers and suppliers may catalogue the same part numbered pump for single turbo, twin turbo and non turbo models. This practise is flawed and dangerous as outlined above.

Cedele supplied EFI pumps have equivalent output and pressure to Genuine OE pumps.

Due to the proliferation of Subaru used imports it is difficult in some models to identify the correct fuel pump. For this reason CDL Autoparts identify the cannister sizes on fuel pumps in the "notes" column of this listing.
