

EWL 30

DESIGNED FOR USE ON CHAIN GUNS, MACHINE GUNS, CREW SERVED WEAPONS AND WEAPON SYSTEMS

DESCRIPTION

Slip 2000 EWL30 has the same properties as the EWL except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30wt. motor oil. It was designed for those who love the EWL, but wanted a lubricant that would not migrate at all and did not want to use a grease. EWL 30 IS a fantastic CLP (cleaner, lubricant, protector)

Slip 2000 EWL30 will not dry out or attract dust or dirt particles like petroleum products. Even when surface is wiped dry to the touch Slip 2000 EWL30 is still present and lubricating the metal parts from within the pores of the weapon. This product does not require a liquid carrier to be present for protection. Slip 2000 EWL30 does not evaporate off because there are no carriers needed for continued protection.

Slip 2000 EWL 30 is a pure synthetic liquid lubricant. Formulated without the use of mineral oil, petroleum distillates, Teflon or silicone. EWL 30 withstands extreme temperature changes (-100°F to +1250°F). It also combines three essential functions (lubricant, cleaner, preservative) into a single product.

It's unique formulation penetrates into the smallest and tightest areas that oils will not go. It will penetrate the micro-pores of the steel and bond with the metal providing a long lasting protective barrier that reduces friction, heat and wear. This protective barrier helps keep lead, carbon, copper and plastic from sticking and building up. Ultimately reducing your cleanup time and keeps all guns operating much smoother for much longer.

ENVIRONMENTALLY SAFE - USER FRIENDLY

Slip 2000 EWL 30 is a GREEN product and was developed with your health, safety and the environment in mind. It is a Biodegradable, Non-Toxic and Non-Hazardous product built from a renewable source. It is also a non-regulated product.

LUBRICATES

Slip 2000 EWL30 has incorporated advanced technology additives to enhance film strength and anti-wear properties. Penetrating the pores and bonding its self to the surface of the metal through physical absorption reducing surface tension thereby reducing friction between moving parts and minimizing wear and the build-up of wear related debris.

**BIODEGRADABLE • USER FRIENDLY
NON-REGULATED
NON-TOXIC • NON-HAZARDOUS**

CLEANS

Slip 2000 EWL30 provides additional protection through additives that in addition to the ability to penetrate between metal surfaces, it will also aid in the effective removal of built up dirt, lead, copper, carbon, corrosion particles and firing residues that can buildup and become abrasive to both recoil and gas operated mechanisms.

PRESERVES

After cleaning, a micro thin film of our enhanced preservative immediately bonds itself and forms a barrier film on the surface that displaces water and provides a corrosion resistant barrier against rust and dirt. It is designed to give protection against hydrogen sulfide (H2S), mild mineral acids, carbon dioxide (CO2), saltwater and brackish environments, musky water, chlorine and similar adverse environments and has passed the Salt Spray Corrosion (ASTM B-117) 150 Hour test. Additionally a barrier of protection is formed to protect against all other fouling of lead, carbon, copper and plastic wad.

SIMPLE TO USE

For best long-term results, apply Slip 2000 EWL 30 to a clean surface and allow to penetrate. Apply to all moving parts that require lubrication and/or protection from corrosion. Apply to inside of bores, barrels, chambers, firing pins, ejectors and trigger mechanisms. Slip 2000 EWL 30 will penetrate and free gummed up and sticky parts. EWL 30 will penetrate into areas where oils do not go, break up and purge out old dried-up oils, carbon, dirt and debris. Slip 2000 EWL 30 can be used as a cleaner on your next cleaning. (For excessively dirty or neglected parts, Slip 2000 725 or Carbon Killer should be used for cleaning.)
