

AKIA Screens Projection Screen Materials Comparison Chart

Screen Material Name	MaxWhite® B	MaxWhite® 2	CineWhite® UHD-B	CineWhite®	CineWhite® P	
Picture						
Description	MaxWhite® B is the most versatile screen surface for front projection presentations. This material provides a wide viewing angle with perfect diffusion uniformity.	MaxWhite® 2 is a matte white front projection material that's been crafted to achieve precise color temperature neutrality to produce accurate colors while maintaining a wide viewing angle.	CineWhite® UHD-B is a front projection screen material that is certified by the world-renowned Imaging Science Foundation for achieving accurate color reproduction and image fidelity.	CineWhite® has a broad light dispersion through diffusion uniformity. It enhances black & white levels while colors remain neutral for various applications and presentations.	The <i>CineWhite® P</i> is a front projection screen material designed for applications in a controlled light environment that delivers perfect color balance and white field uniformity with no hot spots. It has wide diffusion to ensure the viewer is presented with clear and bright images regardless of their seating arrangement.	
Available in Screen Type	Electric Motorized	Electric Motorized, Manual Pull-Down, Tripod Portable, Dual Tripod/Wall Hang	Fixed Frame, Tripod Tab-Tension	Outdoor Folding-Frame Portable, Floor Rising Electric	Motorized Tab-Tension

AKIA Screens Projection Screen Materials Comparison Chart

Screen Material Name	CLR® 2	CLR® 3	CLR® 4	CineGrey 3D®	CineGrey 4D
Picture					
Description	The CLR® 2 is a ceiling ambient light rejecting front projection screen material that rejects up to 90% of overhead lighting and is compatible with tabletop (bottom mounted) short and ultra-short throw projectors. CLR®2 is designed using optical layers and is scratch-resistant. ISF Certified for accurate color reproduction in a dark room.	The CLR® 3 is a ceiling ambient light rejecting front projection material designed specifically for tabletop (bottom mounted) ultra-short throw projectors. It uses optical microstructures to absorb up to 90% of overhead lighting while producing exceptional image brightness, color saturation and contrast for superior picture performance.	CLR® 4 is a ceiling light-rejecting front projection material designed specifically for tabletop-mounted ultra-short-throw projectors. The CLR® 4 features a lenticular structure that gradually changes to absorb light from above while providing proper diffusion to maintain a bright uniform clear image. ISF Certified for accurate color reproduction in a dark room.	The CineGrey 3D® is a reference quality front projection screen material formulated for environments with minimal control over lighting. It was designed to enhance picture brightness, produce accurate color fidelity, and improve contrast levels. ISF Certified for accurate color reproduction in a dark room.	The CineGrey 4D is a 1.1 gain flexible front projection ceiling ambient light rejecting material for standard throw projectors. It can reject up to 63% of off-axis lighting while providing a bright, contrast rich image in moderate light room environments. The CineGrey 4D produces outstanding images with a balanced color temperature for residential /commercial applications.
