Instructions to Adjust the Front and Rear Disc Brakes

To Adjust the Front Disc Brake

1. Turn off the display. Make sure the power is cut off.
2. Slightly loose the two screws circled in red to enable the adjustment of the caliper.
3. Adjust the position of the caliper, put the disc exactly in between of the caliper.
4. Tighten back the two screws. Rotate the wheel to see if the disc rubs the caliper. Repeat the process until there is no noise between the disc and the caliper. Secure the two screws tightly when it is adjusted successfully.
To Adjust the Rear Disc Brake

1. Turn off the display. Make sure the power is cut off.
2. Slightly loosen the two screws circled in red to enable the adjustment of the caliper.
3. Adjust the position of the caliper, put the disc exactly in between of the caliper.
4. Tighten back the two screws. Rotate the wheel to see if the disc rubs the caliper. Repeat the process until there is no noise between the disc and the caliper. Secure the two screws tightly when it is adjusted successfully.
