

Bee Smart[®] The Ultimate Uncapping System[™]

D E S I G N S

Installing Ultimate Bucket Uncapper[™]

- Place **Ultimate Uncapper[™]** on top of empty 5/6 gallon bucket or bottling bucket, making sure it is fully seated on rim. If using bottling bucket make sure honey gate is closed.
- If using bucket strainer or filter bag place these on bucket before installing **Ultimate Uncapper[™]**
- Place frame, medium or shallow, short side down, in support tray with frame ear in recess; the side will sit on the supports.
- Frame can be tilted back against supports to hold upright*.
- Always hold top of frame securely, usually by the frame ear, when using **Capping Slicer[™]** or uncapping knife.

Using Ultimate Uncapping Slicer[™]

- Choose Regular or Deep Slice on the **Ultimate Capping Slicer[™]**
 - Regular is used for fairly even cappings.
 - Deep is used for uneven or depressed cappings.
- Hold frame vertically and tip back slightly; see above if using **Ultimate Uncapper[™]**.
- Grip **Ultimate Capping Slicer[™]** handle and draw cutters through the cappings, using the handle angled slightly away; the **Side Guides** will control the depth of the cut. Use just enough pressure to slice through the cappings.
- Shallow and Medium frames require 3 passes on each side.
- To switch sides lift frame and rotate.
- Drawing the **Ultimate Capping Slicer[™]** from the top down gives the best results.
- Drawing from the bottom up or side to side is not recommended.
- To clean **Ultimate Capping Slicer[™]** or remove any honey/wax build up rinse in warm water.

NOTES

- The **Ultimate Capping Slicer[™]** includes a beveled **Pry-bar** on the end to separate frames in the honey supers, just insert between the frames, near the ends, and twist.
- The **Ultimate Capping Slicer[™]** is designed to sit on a flat surface with the cutters elevated to protect them.
- The **Ultimate Capping Slicer[™]** slicer **Blades** are made from a non-stick material with a micro-texture to prevent sticking.

Safety Hints

Always clean **Ultimate Bucket Uncapper[™]** and **Ultimate Capping Slicer[™]** with warm soapy water and rinse, before and after each use, as part of a safe food-handling program.

* Works with most frames with square corners ears and many frames with rounded/beveled ears.
