

NEW Innovative Mobility Device: Zeen® Disrupts Walker/Wheelchair Industries
Empowers Sitting, Standing, Strolling, Coasting, Exercising and More.

Exokinetics, Inc. is dedicated to helping restore full range of movement and bring new joy and quality of life for those who struggle with diminished mobility. Invented by Hall-of-Fame *Steadicam* Inventor Garrett Brown and partners, the *Zeen* is an innovative mobility technology designed for those battling age, injury, and/or chronic diseases.

Zeen® is the only state-of-the-art mobility device that offers assisted sit-to-stand with continual support for safety, allowing upright walking under your own power. Filling the gap between a wheelchair and a walker, Zeen's motor-free proprietary lift raises the user from a seated position to full standing for eye-level engagement, easy walking, and hands-free access without fear of falling.

Mobility devices don't need to look like medical equipment. *Zeen* was created to be stylish and pleasing in design and function. Pre-adjusted with one's inseam length and desired amount of lift, the *Zeen* effortlessly raises and lowers users weighing between 50 and 250 lbs. This enables rehabbing, disabled, or geriatric persons to be safely on their feet and even transition to walking or coasting ('*Zeening*'), while the saddle/seat-belt combo helps eliminate the risk of falls. Studies show that being upright is beneficial for cardiac, circulatory, muscular, digestive, and even psychological fitness.

Zeen is the perfect solution for independent mobility, freedom of movement, and a healthier active lifestyle. Zeen Care Specialists are available to answer questions and help find a certified distributor near you (<https://www.gozeen.com/>).
