

1 For best results, please place the bottle stopper with an opened bottle of wine in a refrigerator.

The stopper will read the temperature of the refrigerator that was used for storing the opened bottle of wine.

2 When you decide that you want to drink the wine, please pull the bottle of wine out of the refrigerator and place it on the counter.

3 Place the stopper around the neck of the bottle in preparation of pouring the wine.

(It also prevents spilling when you pour)

4 When the desired temperature is obtained with the thermometer, you may go ahead and pour the wine to consume.

5 When done pouring wine, please use the stopper and place it inside a refrigerator for storage.
