

Wine Rack Instructions

Step 1: Deciding where the racks will go.

Please allow 3 1/4" between the Left and Right rack supports. If multiple rack sets are being used side by side, allow at least 8" between rack sets. Please check your bottle height to verify that this will be acceptable for you. (See Diagram "A" below)

Step 2: Mounting the Racks

Mounting is done by placing 3 screws in each of the three holes located on each rack support. If possible place racks over studs in the wall. If this is not possible you will need to purchase wall anchors. (See Diagram "B" below)

Note: When racks are full of bottles they will weigh approximately 100 lbs.
