Wine Cooling Units - Vinotemp International

Vinotemp offers the VT-12 wine cooling unit, featuring thermoelectric technology, which allows powerful protection for the wine with a quiet, efficient operation, the company says. The thermoelectric technology has no moving parts, thus offering less vibration and keeping a temperature accuracy of +/- 0.1 degrees Celsius. The VT-12 is freestanding with double-paned glass door, and comes in a black cabinet with a stainless door trim and handle.
