General recommendations

The grill leaves the factory with the pre-cured paint. It is possible that the first start-up of the grill gives off a smell of burnt paint, this is because the paint cures in use, this event is normal and will not be repeated in subsequent starts.

During this final curing process, the surface of the curing should not be touched as this could damage the paint.

Do not burn plastics derived from petroleum.

Do not get wet, in contact with moisture, the equipment will oxidize.

Choose a dry place to store it, protecting it from the elements and climatic factors (rain, dust, etc.)
