Dip Powder Follow the step-By-Step Guide

PREP

1

Prep nails by pushing back cuticles with 14 Day Mani nipper and pusher.

2

Buff the nails with a 14 Day Mani nail file or white buffer block.

3

Dehydrate nails with 2 pumps of acetone on a 14 Day Mani Lint free wipe. This removes any grease from the nails.

APPLY

4

Apply a thin layer of pro base to the entire natural nail.

5

Dip your nail into desired 14 Day Mani dip powder at a 45degree angle.

6

Leave your finger for 2-5 seconds. Remove and dust off excess with a powder brush.

7

Repeat steps 4, 5 & 6 2-3 more times.

APPLY

Apply activator over your entire nail to seal the powder. Wait for the nails to set, use the "tap test"; if you tap a file on the nail and it makes a sound the dip powder is dry and ready to file.

File and buff the nails.

Apply the activator once more and let air dry. (Roughly two minutes)

FINISH

Take a lint free wipe with two pumps of acetone and wipe the entire nail. This will remove any dust.

12

Apply finish gel and let air dry for 2 minutes

13

As an extra step, you can finish off the look with our No-Wipe top coat for a glossy shine and cure under our UV/LED lamp for 30 seconds.
