v1.0	Initial version		

About the DDUXX1 SIM Dashboard

The DDUXX1 Sim Dashboard is backed by a standard 2-year warranty, underscoring our commitment to quality. Post-warranty, replacement parts are available through our customer support. Users can opt to install the new parts themselves or choose to send the dashboard to us for professional repairs. This ensures the DDUXX1 maintains its resale value, as worn-out or damaged parts from extensive use can be readily replaced.

We trust that the DDUXX1 Sim Dashboard will provide you with a satisfying simulation experience. If you enjoy using it, please consider leaving a Google Review and tagging us on social media!

1. Hardware installation

To connect the DDUXX1 to you PC, you have to mount the display to your sim. This can be done with the provided brackets. It's possible to mount them on various wheelbases and directly to a Alu profile.

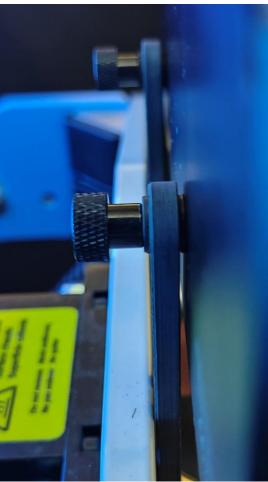

1.1. Display mounting

The brackets can easily be mounted on the display. Use the included M3 fasteners in combination with the nylon rings. **Use a nylon ring on both sides of the bracket.**

Because of the slot design, the display can easily be mounted at various heights.

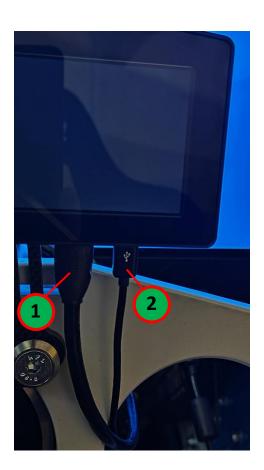

2. Electronical installation

The connection to the DDUXX1 from the computer is through the HDMI-cable (1). The micro-USB cable (2) can be connected to the computer or an external adapter (at least 500mA). Both have to be connected.

3. Software installation

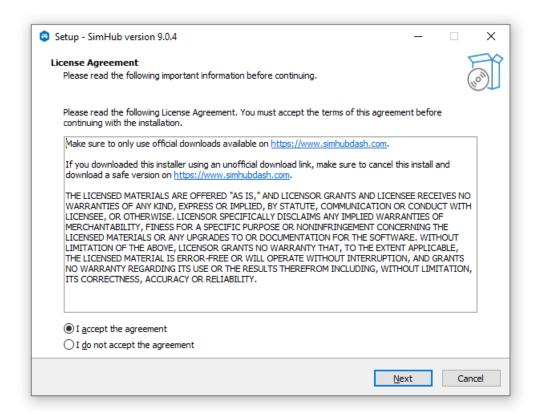

3.1. SimHub

SimHub can be used to control the display. Download the latest version of SimHub from https://www.simhubdash.com/download-2/.

Installation instructions may be slightly different depending on the SimHub software version.

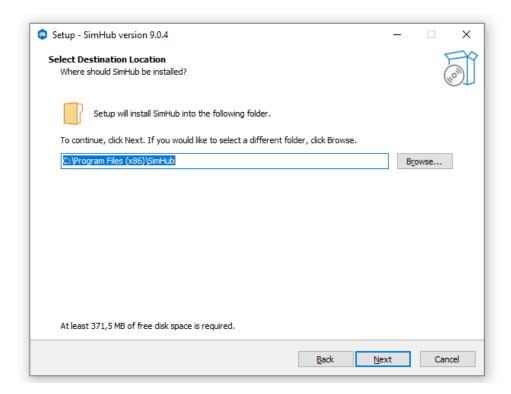

3.1.1. Installing SimHub software

Accept the agreement and press "Next".

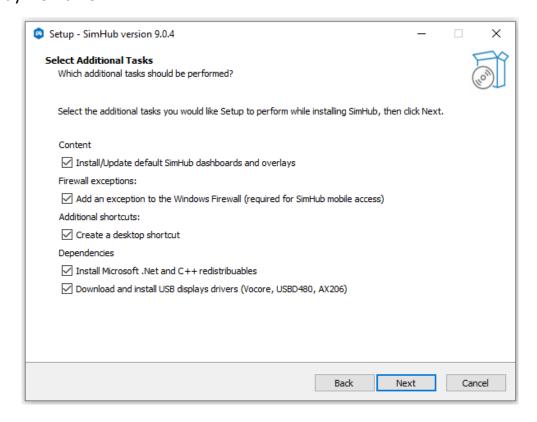

Specify where you want to install the software and press "Next".

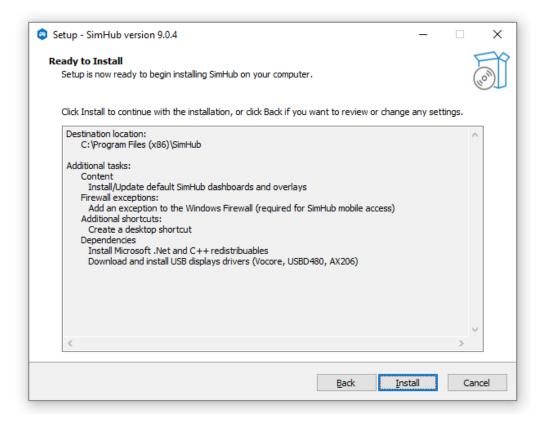

Check all boxes and press "Next". Make sure the "Download and install USB displays drivers (Vocore, USBD480, AX206)" box I checked, otherwise the display won't work.

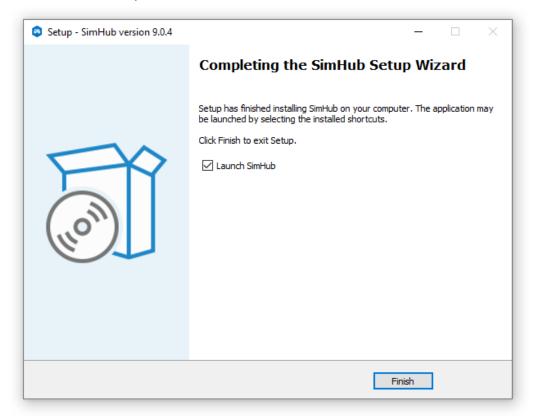

Press "Install". The installation may take up to 5 minutes.

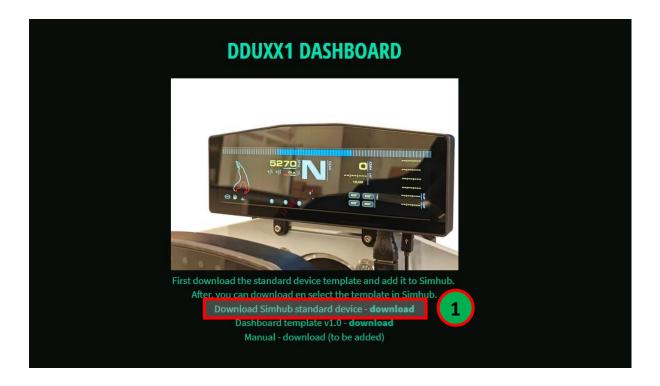

After the installation press "Finish".

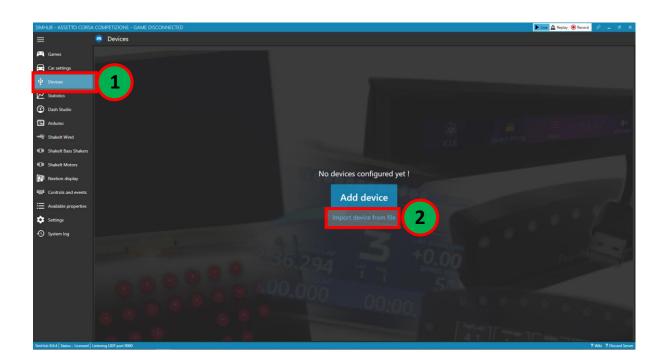

3.1.2. SimHub configuration

Download the standard device file from: www.simrep-engineering.com/downloads

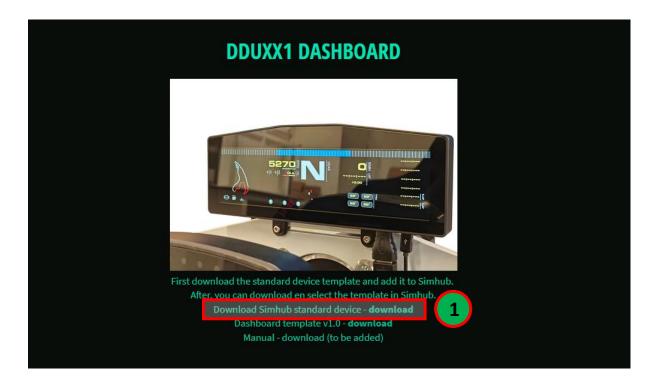

Click on "Devices" (1) and "Import device from file"(2). Select the file you just downloaded.

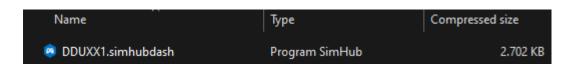

Download now the "Dashboard template" from: www.simrep-engineering.com/downloads

Dubble click on the downloaded file to import it to simhub.

You will get this pop-up

Click on "Import into SimHub libary".

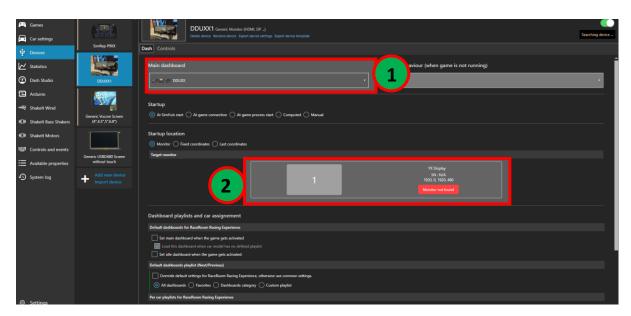

If this doesn't work, you can also go to "Dash studio" inside Simhub. And then click on "Import dashboard" and select the downloaded file.

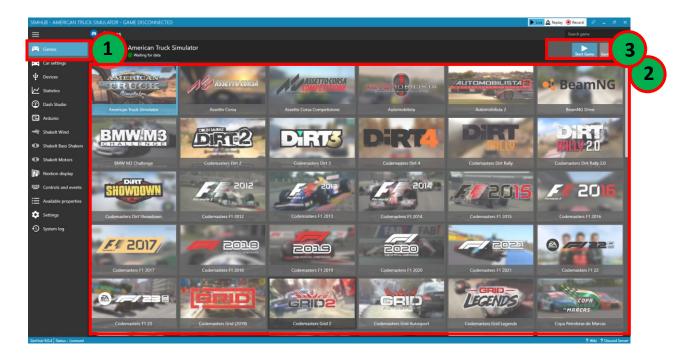

Now you can add the dashboard to the DDUXX1 screen. Select the dropdown menu (2) and select the DDUXX dashboard.t

At last, select the screen. Click on "Target monitor" (1) and select the DDUXX screen.

Go to the "Games" tab (1), select your game (2) and click "Start Game" (3)

4. Troubleshooting

• Screen is not working

- Make sure you have the HDMI cable connected. Also use a HDMI port in you GPU (the motherboard HDMI does not always work).
- Make sure you have the Micro USB connected as well, to a PowerSource of at least 500mA (0.5A).

Can't mount the display

 Sometimes it's hard to mount the display. Please contact us about this or consult you frame builder.
