

DESIGN FEATURES

SAFETY ENGINEERED

Railed platform deck on top of all-welded construction allows working a large area from a secure, steady platform. Step-Lock holds the entire unit where you want it . . . no rolling when user is on the deck.

REACHES HIGH SHELVES

With an average eye level of 10.5' on the SH-6-TR, the user can easily reach high shelves or racks that are beyond the capacity of most carts.

RUGGED CONSTRUCTION

Natural satin finish non-rusting aluminum alloy is 1/8-inch sheet and angle stock with 3/4-inch IPS pipe. All-welded construction with reinforced stress points insures low maintenance and long life. Spring-lift ladder is aligned and bolt-mounted in adjustable guides. User's weight depresses and holds ladder to floor for firm, positive bearing. Steps are specially extruded for strength and safety. Other quality features that reduce impact, noise, and wear include Delrin ladder guide sleeves, rubber bumper stops, ladder feet plugs and rubber tips, ball-bearing caster swivels, and wheels with non-marking rubber tires and shimmy dampeners.

MODEL SH-6-TR

High 30" x 48" working platform with handrail puts user eye-level height at 10.5' with reach to 12.5' or more. Long shelves have vertical clearance for objects to 28.75" high.

MODEL S-7-2

Has the strength and height of a Hi-Level ladder plus the utility of a 2 shelf stock picker. Clearance between shelves is over 28".

MODEL 89151

HEAVY-DUTY LADDER CART

With this heavy-duty cart reaching 11 feet high, this cart is ideal for hard-to-reach racking or high maintenance jobs.

MODEL AL-1

This unit provides a stable, maneuverable work platform for maintenance jobs or stock picking in normally out-of-reach areas. Top step height is over 8 feet, which puts user eye level at 13 feet and adjustable work tray extends to over 11 feet. This model features a ballast tank that holds 170 lbs. of water to give added stability and a hinged top section that folds to clear doorways.

SPECIFICATIONS

Dimensions in inches, weight in pounds
