FW-BOLT-KIT

Bolt Kit for Late Bus/Vanagon Flywheel/Flexplate [76-91]

When replacing your flywheel (manual transmission) or flex plate (automatic transmission), it is **highly** recommended that the five bolts securing it to the crankshaft be replaced.

This internal-hex bolt and locking compound kit is a direct replacement for all flywheels or flex plates original fitted with internal-hex bolts. It also replaces the external bolt and lock plate system originally used on air-cooled engines. If you have this other system, discard the metal locking plate, use the locking compound and torque the bolts to 81 ft-lbs (110Nm).
