GW-1011-LOW-RISE

LOW-RISE SPACER FOR YAKIMA 1A RAINGUTTER TOWER

INSTALLATION

1. Remove the rivet from tower. A Dremel with a cutoff wheel works well.
2. Unscrew the top of the tower and remove the bolt.
3. Place the plastic sleeve in the spacer. Thread the top back on the tower using the longer bolt and washer.
4. Install the new rivet using the push nut. Simply push the nut onto the rivet.
5. Repeat this process for as many towers as you have.
6. Put the rack back on your van.
7. Enjoy!
