JEEVES INSTALLATION INSTRUCTIONS

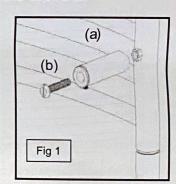

- * Please read the Safety Measures before installing your Jeeves Heated Towel Rail.
- * All installations should be in accordance with National and Local electrical codes.
- * The Heated Towel Rail should be installed by a certified electrician.
- * To ensure the Heated Towel Rail is mounted securely, fasteners should be secured in studs, or alternatively, in structural members that are placed behind the rails.

Step 1

Attach the 4 stainless steel tube assemblies (a) onto the unit as shown in Fig 1. Allow the set screw to face downwards. Install and secure one slotted bolt (b) through the center of the white bushing, threading it onto the nut welded on the unit.

Step 2

Decide where to install unit and the location of the single gang junction box. This can be done by either placing the assembled rail against the wall or taking approximate dimensions from the drawing supplied.

Remember: Unit should not be mounted closer than 2 inches below an overhanging surface (i.e. shelf) and no closer than 1-1/4 inches above the floor and/or baseboard.
