

OSMO COVID-19 CLEANING AND REJUVENATING RECOMMENDATIONS

Osmo suggests using alcohol-based disinfectants & sanitisers for oiled surfaces. Other types of disinfectants which contain strong oxidising agents such as chlorine based bleach are not recommendable for oiled surfaces. They will quickly degrade any natural coating or material.

Even alcohol-based disinfectants are harsher than the normal cleaning with Osmo Wash & Care (which contains oils to maintain the surface), so application of a refresher coat of Osmo Polyx Oil or Osmo Maintenance Oil (preferred) will be necessary more frequently.

Please see the instruction sheets for Osmo Maintenance Oil.

When cleaning Osmo finished surfaces avoid too frequent use of the Osmo Liquid Wax Cleaner. It should be used only when previous applications have worn off. If used too often the Liquid Wax Cleaner can build up and create a softer, slightly sticky surface.
