

## MAKE MORE WITH MAKER MADE

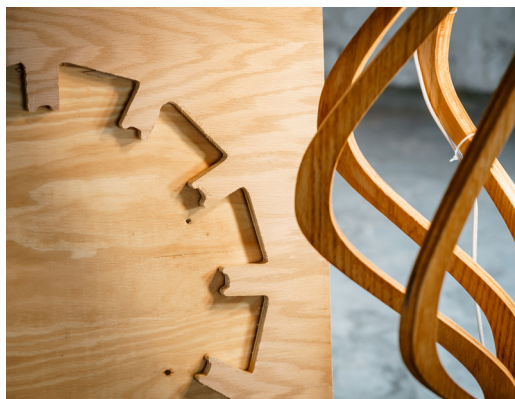

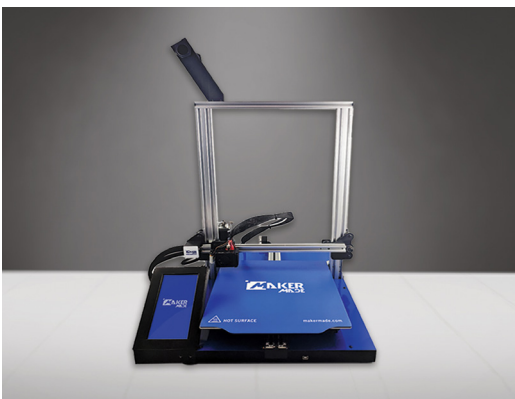

Maker Made started as a passion for serving makers and that remains our first priority as we are constantly innovating in order to serve the Maker Community.

Based in Fayetteville, Arkansas, Maker Made was founded by Chris Skiles and Patrick Kinnamon in 2018. Our founders connected over their mutual love for technology and a passion to make. They founded Maker Made on the desire to serve the maker community. They love the freedom these tools provide and want to create a world where **anyone that wants to Make More can have access to purchase the best quality machine at the best price.**

As we have grown since our beginning in 2018, our team of 10 has poured countless hours into product development, support and the community of Maker Made. **Our goal is to continue to support the Maker community for years to come with continued innovation and design and community growth.**

Maker Made develops and produces innovative tools and products such as CNC Kits, 3D Printers and maker software as well as supports a community of makers through our forums and project marketplace. **We aim to provide the highest quality tools at affordable prices to encourage the growth of the Maker Movement.**

Maker Made is committed to offering innovative and intuitive products in an accessible way to enable the creativity of makers everywhere. We hope to inspire our makers to re-imagine what is possible through innovative products and a supportive community platform.
