

LIPOSOMAL PUREWAY[™]

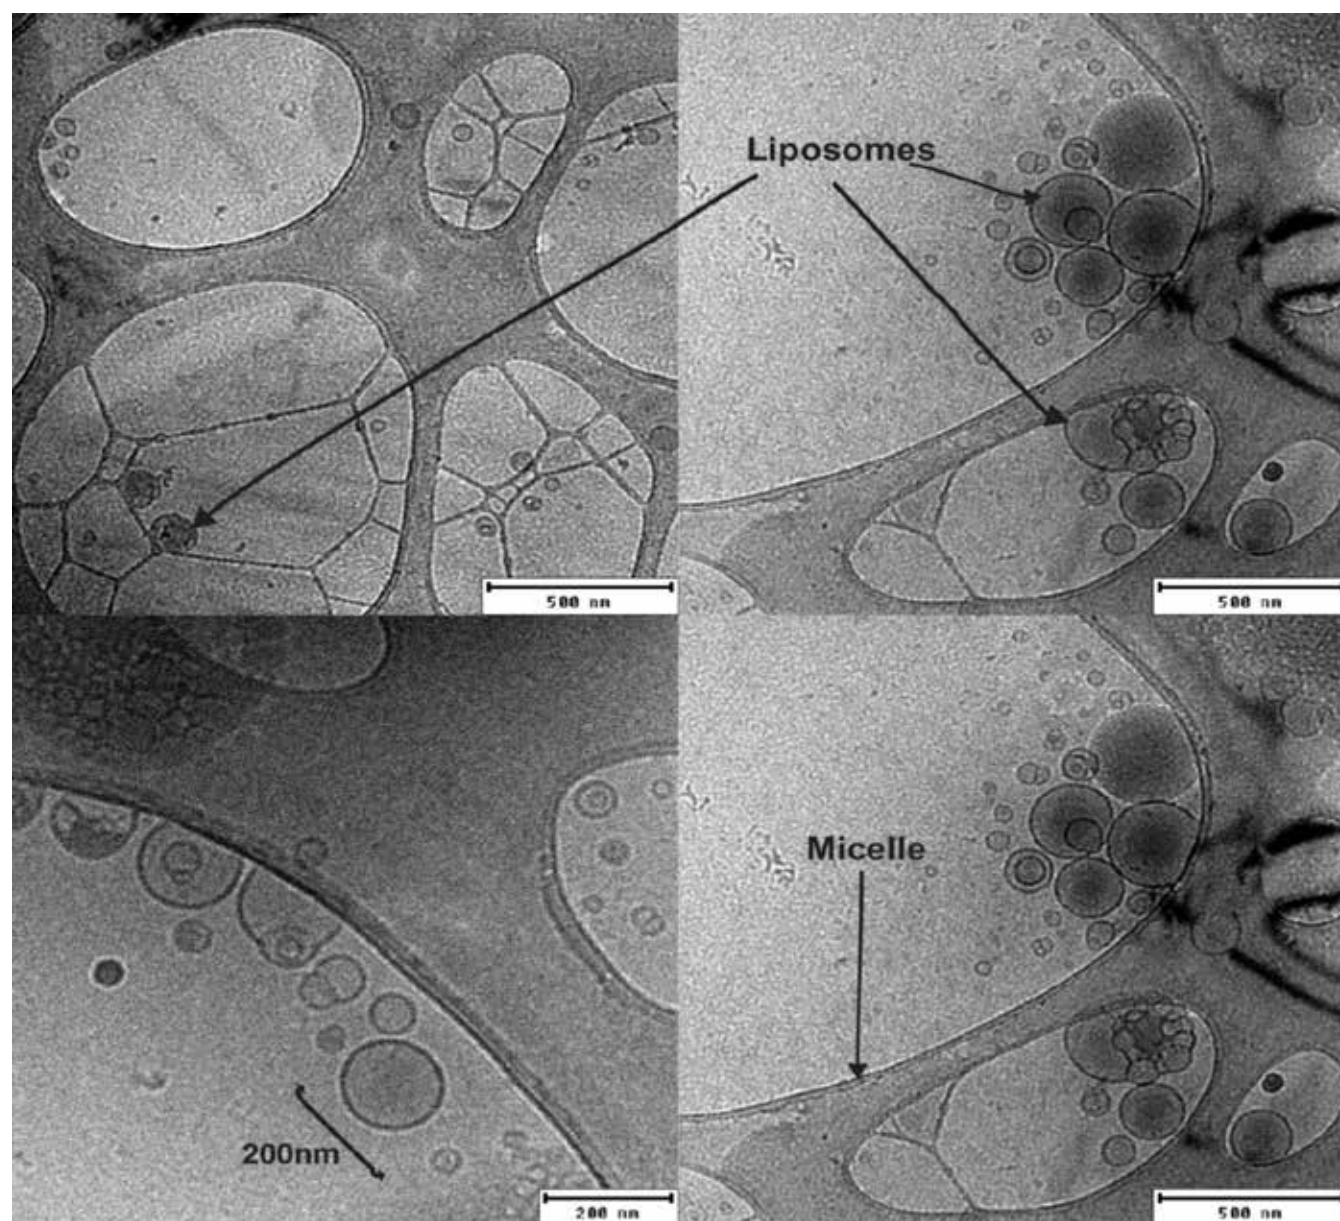

Antioxidant Super Nutrient

WHY LIPOSOMAL PUREWAY-C[™]?

Consumers around the world are becoming increasingly aware of the benefits of Liposomal delivery technology to maximize absorption of dietary supplements in the body.

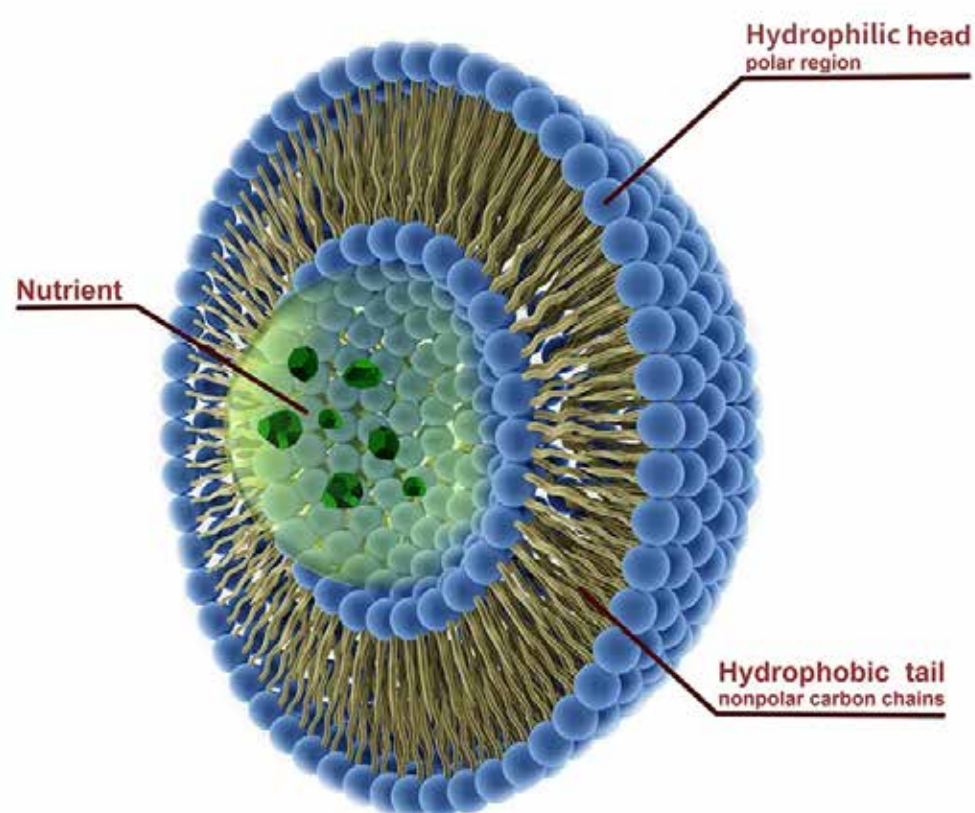

With a great discrepancy in Liposomal quality throughout the industry, we promise our customers the highest-quality and most efficacious Liposomal Vitamin C on the market: Liposomal PureWay-C[™]. Our advanced microscopy scans taken by third party lab, Advanced Microanalytical, depict distinct and uniform liposome globules with actives depicted clearly, ensuring encapsulation of Pureway-C[™] with hydrophilic and hydrophobic lipid membranes. The TEM images show our Liposomes are the proper particle size and the globules are distinct in uniformity. These images prove that Liposomal PureWay-C[™] is truly a Liposomal technology and NOT simply an emulsion.

Liposomal PureWay-C[™] is created with a proprietary all-natural process using no alcohols or solvents and uses Non GMO, Vegan, Halal, and Kosher Sunflower Lecithin.

STRUCTURE OF LIPOSOME

HOW IT WORKS:

Liposomes are manufactured microscopic, hollow spherical vesicles composed of a lipid bilayer. This lipid bilayer incases essential vitamin C, which both protects it from gastrointestinal degradation and enhances absorption. When loaded with PureWay-C[™], delivery of active Vitamin C is maximized. The liposome intestinal absorption override the usual pattern of an encapsulated drug. The absorption is accelerated and better absorbed by the body.
