

EMV-STARTERBOX

Function

The box for all EMC eventualities. These boxes contain shield clamps for all common shielded cables with diameters from 3 to 16 mm. They can be attached to bus bars or top-hat rails or screwed on directly. The special design of the shield clamps means that the shield connects neatly to the installation location. The simple and tool-free assembly is vibration-proof and maintenance-free. The permanent and continuous pressure on the cable shield means that the spring tension does not need to be readjusted.

Note: The components can be easily mounted on the cables without any tools, and provide optimal cable shield contact. No need to readjust the spring tension – the shield is under permanent, constant pressure.
