

# Osborne<sup>TM</sup> Quality Seeds

[osborneseed.com](http://osborneseed.com) | 800-845-9113 | [info@osborneseed.com](mailto:info@osborneseed.com)

## SYMBOL KEY & DEFINITIONS

**F<sub>1</sub>**

**Hybrid variety:** Cross between two genetically distinct parent lines chosen for specific traits, using traditional breeding methods. Hybrids typically show better vigor, uniformity of size and shape, and disease resistance than open pollinated varieties.

**Organic:** Seeds are grown and produced in organic systems without the use of synthetic elements.

**(U)**

**Untreated:** Seeds are grown in conventional systems, but have no further synthetic elements on the actual seed.

**(T)**

**Treated:** Seeds are grown under conventional systems and have a synthetic coating that is brightly colored (red, green, and blue are common). When handling treated seeds, it is suggested to use gloves and a mask. For organic growers, treated seeds are prohibited.

**FarMore:** seed treatment provides early season protection against seed and seedling diseases, as well as cucumber beetle.

**Cruiser:** seed treatment provides early season protection from sucking, chewing and soil pests.

**NEW!**

**Osborne  
EXCLUSIVE!**

**New Addition:** Varieties that are new to our catalog for this edition.

**Osborne Favorite:** Our seal of approval on our highly recommended products.

**Osborne Exclusive:** Varieties that are only available to purchase through us.

**AAS Winner:** Varieties that have received a seal of recognition, the All-American Selections award at regional and national levels, through a judging process by a panel of expert judges.

**Orna-Edible™:** Varieties that offer unique ornamental opportunities with the added bonus of being edible. From cut flower arrangements to fall displays, look for this symbol to expand your marketing with beautiful, edible displays.

# CORN SWEET CORN

## BASICS

Answer these questions to help determine what type of sweet corn will best fit your need:

**Do you have the ability to isolate between types of sweet corn?** All corns need to be isolated from each other if you are planting different colors and different types.

Isolation options are:

- -250 ft. between variety plantings or
- -10 days between maturity or
- -A completely separate field or
- -A physical barrier.

**What is your soil type?**

Is your ground heavy creating challenges for germination in wet cool seasons?

What type of planter do you have?

Planters that use plates do a better job of seed placement with larger kernelled seed. Finger, air, or vacuum planters offer the ability to plant any size or shape seed with great accuracy.

**Do you have refrigeration or a cooler?**

All corn keeps without refrigeration for at least one day but as time progresses the corn continues to respire and the sugars convert to starches, so the corn loses its sweetness. Refrigeration slows this conversion process down thus extending the shelf life.

**Know your market...what are your customers looking for?**

If you're not sure try several different types and offer tastings or give away ears with the request for feedback. As time progresses the market continues to shift toward bi-color and high quality Supersweets. This is the type of corn your customers are buying in the winter or off season so they will expect the same high quality in season.

Confused by all the nomenclature? Let's try to simplify it:

**su aka Standard**

Traditional varieties that started the sweet corn revolution; these have been on the market for years. They taste best when eaten within hours of picking. Less sugar per kernel with very limited storability. Larger sized seed for good emergence under tough conditions. Isolation required for kernel color but not taste. Sold by weight. Example: Silver Queen.

**se aka Sugar Enhanced and sy aka Synergistic**

The next generation after su for an increase in sugars with the benefit of the traditional corn flavor, often very creamy in texture. Breeders have enhanced the se class with additional sugary kernels and created a new class, sy Synergistic. These varieties are branded as Synergistic, Augmented, Triple Sweet and Synergistic Plus. They taste best when eaten within 2 days of picking. Medium sized seed with generally good emergence in tough conditions. Isolation is required for kernel color but not for taste however sugars are enhanced if isolated. Sold by seed count or Ms. Se example: Temptation, sy example: Allure.

**sh2 aka Supersweet and shA aka Augmented Supersweet**

Leaps above se for sugars. These varieties have the ability to hold in the field for several days as well as hold in cold storage for an extended period of time because the sugars convert to starches very slowly. Breeders have branded these enhancements in sugars and tenderness of pericarp with names like Xtra-Tender, Reserve, Augmented and Augmented HQ. Isolation is required for kernel color and taste. If these are not isolated from all other corn types the sugars will revert to starch and produce an ear similar in taste to field corn. Increased sugars in the kernels perpetuate smaller seed size or higher seed counts per pound. Sold by seed count or Ms. sh2 example: Mirai. shA example: Epiphany.

VARIETY NAME	DTM	EAR LENGTH	ROW COUNT	PLANT HEIGHT	EAR PLACEMENT	RESIS-TANCE	DESCRIPTION
<b>CATALYST XR F1 (U)(T)</b> Xtra-Sweet™	66	7.5 - 8.25"	14-18	75"	27"	HR: Rp-GDj	The earliest super sweet on the market with the best seed quality. Admi- rable ear size, strong tip fill, and outstanding kernel color. This hybrid fits the 1st early slot for fresh markets and shipping.
<b>KICKOFF XR F1 (U)(T)</b> 🌽 Xtra-Tender™	69	7.5 - 8.5"	16-18	73"	28"	HR: Rp-G	A second early bi-color with excellent ear size, high row count & great eating quality. Strong seedling vigor with good husk cover and overall package.
<b>HERO XR F1 (U)(T)</b> Xtra-Tender™	71	7.5 - 7.75"	14-18	71"	24"	HR: Rp-GDj	Strong seedling vigor for a 2nd or 3rd early planting on a strong stocky plant offers tolerance to lodging. Good tip cover with excellent flag leaves to protect a high quality, sweetkerneled ear.
<b>274A F1 (U)(T)</b> Xtra-Tender™	71	7.75 - 8.25"	16-18	74"	26"		Sets the market for sweetness and flavor plus an attractive husk package with market leading seedling vigor. Large ear size makes this variety a good start for any roadside stand.
<b>SIGNATURE XR F1 (U)(T)</b> 🌽 IFSI Reserve™	72	7.5 - 8.25"	16-18	78"	27"	HR: Rp-GDj	Phenomenal eating quality with an attractive husk cover, excellent hold- ing ability in the field and great ear size makes this variety "choice" for quality driven fresh markets.
<b>XTH20173 F1 (U)(T)</b> IFSI Reserve™	73	7.25 - 8"	14-18	72"	23"	HR: Rp-GDj	This easy pick hybrid with outstanding eating quality and incredible kernel color offers great yield potential. Need a taller plant, higher ear placement and consistent ear size, try Signature XR.
<b>MIRAI 315BC F1 (U)(T)</b> 🌽 Supersweet <small>Osborne EXCLUSIVE!</small>	74	7.75 - 8"	16-18	68"	28"		The Mirai series has the reputation of being one of the sweetest and most tender super sweets on the market, period. Mirai 315BC is your choice for the early to main season planting slot with very refined kernels and uniform ears with strong tip fill. Don't miss your opportunity to plant this historically popular variety. Must be planted in warm soil.
<b>NATURAL SWEET XR F1</b> 🌽 Xtra-Tender™	74	7.5 - 8.25"	16-18	72"	29"	HR: Rp-G	Strong seedling vigor aids in good stand establishment for direct seeded plantings. Organically produced seed with excellent eating quality. Similar in package and performance to its sister hybrid Natural Bright XR, Natural Sweet XR offers strong seedling vigor with an appealing husk package.
<b>SUPERB MXR F1 (U)(T)</b> Xtra-Tender™	74	7.5 - 8"	16-18	74"	22"	HR: Rp-G, MDM	Good yield of large sized ears with improved husk protection make this a dependable variety for mid-season fresh and shipping markets.
<b>EPIPHANY F1 (U)(T)</b> Augmented™ <small>Osborne EXCLUSIVE!</small>	75	8"	16-18	63"	25"	HR: Rp-Gf, NCLB, MDM	An improvement over Nirvana and Xanadu with an elevated disease package, higher ear placement for ease of harvest, same unique great flavor, and tender texture that customers demand.
<b>CALIBER XR F1 (U)(T)</b> Xtra-Tender™	76	7.5 - 8"	16-18	70"	27"	HR: Rp-G	Strong plant with lodging tolerance, great eating quality and husk pack- age for roadside and shipping markets.
<b>MIRAI 301BC F1 (T)</b> Supersweet <small>Osborne EXCLUSIVE!</small>	76	7.5 - 7.75"	16-18	84"	30"	IR: Ps, SW	Mirai 301BC is a great choice for the main season planting slot with a refined ear and strong tip fill. Attractive husk package is seen in this long popular high eating quality super sweet corn. Seed must be planted in warm soil.
<b>NEW! TROUBADOUR XR F1 (U)(T)</b> IFSI Reserve™	76	7.5 - 8.5"	16-18	79"	29"	HR: Rp-G	Newest addition to the IFSI Reserve line up. Troubadour XR offers very tender pericarp with outstanding eating quality. Dark green husk offers good protection on strong lodging resistant plants. If you like Signature XR, add Troubadour XR to your planting schedule. You won't be disappointed.
<b>AMERICAN DREAM F1 (U)(T)</b> IFSI Reserve™ <small>AFS</small>	77	7 - 7.5"	16-18	72"	26"	IR: MDM, NCLB	Outstanding eating quality on a trim ear with extraordinary tip fill wrapped in an attractive husk. 2018 All-America Selections Winner eats like a Dream! Looking for a larger ear in the Reserve class, try Troubadour XR.
<b>CADENCE XR F1 (U)(T)</b> Xtra-Tender™	78	7.5 - 8.25"	16-20	82"	25"	HR: Rp-G	Full season high eating quality hybrid with extra large ear for roadside mar- kets. Offers good tip fill in an attractive husk package with good flag leaves.
<b>NEW! SALUTE XR F1 (U)(T)</b> Xtra-Tender™ <small>Osborne EXCLUSIVE!</small>	80	7.2 - 8.25"	16-18	78"	27"	HR: Rp-GDj IR: NCLB	Beautiful long clean ears make large size to end your corn season on a high note. Short shank, excellent husk coverage and very good flag leaves round out the package for this late season variety. Great for tray pack.

## BI-COLOR | se & sy

VARIETY NAME	DTM	EAR LENGTH	ROW COUNT	PLANT HEIGHT	EAR PLACEMENT	RESISTANCE	DESCRIPTION
<b>SWEETNESS F1 (U)(T)</b> Synergistic	68	8"	14-16	72"	18"	IR: NCLB, Ps, SW	Good cold soil emergence and vigor, combined with a high eating quality large ear make this variety an outstanding sy for your first early planting.
<b>TEMPTRESS F1 (U)(T)</b> Quad Sweet	70	8"	16	76"	20"	HR: Rp-GDj IR: NCLB, MDM	An improved variety over Temptation offering strong vigor and improved emergence in early planting windows. The sturdy plant has excellent ear size and superior eating quality making this a real winner in your early season time slot.
<b>EVOLUTION F1 (U)(T)</b> Synergistic Plus	72	7.5 - 8"	16-18	78"	25"	IR: Ps, NCLB, SW	Good cold soil emergence combined with attractive husk package and outstanding eating quality make this new to the market sy a variety you will want to try.

# CORN ORNAMENTAL

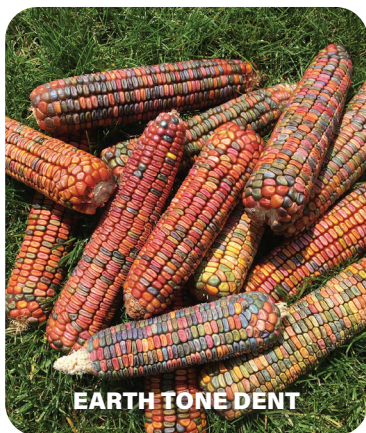

DOUBLE RED

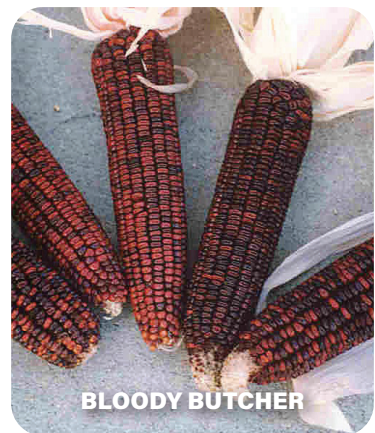

PAINTED MOUNTAIN

OAXACAN GREEN DENT

EARTH TONE DENT

BLOODY BUTCHER

GLASS GEM

Days = relative days from direct seeding to maturity

## DENT

Ear Length

Resistance

**NEW! DOUBLE RED (U)** 🌽 🌽  
6-7"

85 days

Young ears are white with red dots at the silk attachment. If left on the stalk to mature ears will be shades of red, some so dark as to look black. The entire 6-7' plant, husks included, will mature entirely to red. Used for eating, drying and flour production.

**PAINTED MOUNTAIN** 🌽 🌽  
7"

85 days

Painted Mountain produces uniform ears in a rainbow of colors that vary from ear to ear. Although it is grown mostly for ornamental purposes, it can also be eaten as hominy, food for livestock or ground into extremely soft flour. Short, stout plants mature before other ornamental varieties. Performs well in stressful climates and diverse environments.

**EARTH TONE DENT (U)** 🌽  
8-10"

90 days

Large ears have beautiful kernels the colors of fall hues in blue, orange, green and pink. Earth Tone Dent's colorful ears grow on 8-10' plants. Use for ornamental display and to make cornmeal.

**OAXACAN GREEN DENT (U)** 🌽  
6-8"

95 days

Interesting shades of green, these ears add a unique color to your fall displays. Native to the Oaxaca state of Mexico, this corn is multi-purpose for making cornmeal or for ornamental use.

**GLASS GEM** 🌽 🌽  
6-8"

100 days

A stunning ornamental corn with colorful, translucent kernels that look like glass beads, an extremely eye-catching item for any fall display. Bred by Carl Barnes of the Cherokee nation, who helped preserve and renew many Native American corn varieties. Dried ears may be used as popcorn or for flour.

**BLOODY BUTCHER (U)** 🌽  
10"

105 days

Farmers have grown Bloody Butcher since the mid-19th century. This impressive ornamental corn grows 10-12 feet tall and has multiple ears per stalk, which are pink or red. May also be used for flour and cornmeal.

## POPCORN

**FIRECRACKER F1 (U)** 🌽  
5"

95 days

Mix of multicolored, mini ears for popcorn and ornamental displays. Firecracker has good cold soil emergence, producing high yields on red, 7.5' tall stalks. When popped, kernels are white flakes.

**EARLY PINK POPCORN (U)** 🌽  
5-7"

100 days

Light pink to purple mature kernels make tender, delicious popcorn. Early Pink Popcorn is also a great variety for sweet tasting microgreens. Grow in the dark for tender, bright yellow shoots.

**MINIATURE BLUE POPCORN (U)** 🌽  
2-4"

100 days

Unique, metallic blue, mini ears are perfect for eye-catching fall displays and for making tasty popcorn. Miniature Blue produces uniform ears with shiny kernels.

**POOF F1 (R400MR) (U)** 🌽  
7-8"

103 days

HR: Ps, St, NCLB, GW

Large ears have the highest yields of 80% mushroom kernels out of any other variety on the market. Stalks are robust and healthy with added disease resistances. Kernels are a deep orange that taste delicious when popped!

**SNOW POP F1 (R98114W) (U)** 🌽  
8.5-9"

104 days

IR: Goss's Wilt, HR: Ps

A great eating white popcorn that yields as well as yellow varieties. Snow Pop (R98114W) has strong stalks and good disease package to ensure a successful crop.

STRAWBERRY POPCORN(U)🌽  
2 x 1.5"

Strawberry-shaped ears add distinction to a centerpiece, wreath or other ornamental display. Garnet red kernels are tightly packed on the small cob. Can be used as a micro green/shoot with very sweet flavor when blanched.

Pricing is per LB or per M

ORNAMENTAL GRASS

Plant Height  
**NEW! FROSTED EXPLOSION (P)** 90 days  
24-32"  
This easy to grow grass adds delicate texture to any bouquet. Frosted Explosion can be harvested early when seed pods are green and later when the plumes turn bronze. Plants must have 14 hours of light to ensure good stem length. Can be grown in greenhouse, high tunnel and open field.

**FEATHERTOP (U)** 120 days  
22-24"  
Fluffy 6" plumes that add unique texture and accents to cut flower arrangements and landscapes. Feathertop can be used fresh or dried. Grown as a hardy annual, or tender perennial in Zones 9-10.

**MIXED COLORED BROOM CORN (U)** 120 days  
7-9'  
Tall stalks with 24-36" seed heads of varying shades of red, brown, cream and purple. Commonly called Broom Corn, with stalks that are similar to corn, it is actually Sorghum bicolor. Seed heads can be harvested at any stage of development for use in fresh flower bouquets, ornamental displays, or brooms. Colors will deepen and seeds will become heavier and shinier as they mature.

**PURPLE MAJESTY F1 (U)** 120 days  
48-60"  
This millet has a dark purple/brown coloration that is a unique and stunning addition to cut flower arrangements and ornamental displays. Young plants start green and turn to purple as they mature.
