Installing Brackets

A. **Inside Mount:** Install brackets minimum 2" from the side frame.

B. **Outside Mount:** Measure the total width of shade, then center over the window frame. Install the spacers before brackets minimum of 2" in from each end. Once Spacers are attached, install brackets to spacers with one screw per bracket. We recommend installing blind 3" above window frame.

Brackets must be securely attached to the mounting surface. If the screws provided do not hit wood studs you'll have to use a different fastener which can be found at any hardware store.

NOTE: Keep the blind up during installation.

Installing Shade

Begin with sliding shade in back end lowered with back end lowered enough for lip of bracket to make contact with lip on top of cassette. Once contact is made beg in to lift back end up until you hear a click.

Then place stability block on chain side between mount and wall.

How To Install

Safety Tension Device

WARNING ⚠️

*Young children can strangle in the loop of pull cords, chains and tapes, and cords that operate window coverings.

*To avoid strangulation and entanglement, keep cords out of the reach of young children. Cords may become wrapped around a child's neck

*Do not tie cords together. Make sure cords do not twist together and form a loop.

Installing Tension Bracket

Step 1: Pull tension device down to where there is very little slack. Mark the area where the bracket sits.

Step 2: When placed in the correct spot, use two screws to secure bracket.

Step 3: Place tension device on to bracket, secure with a screw and remove stopper from top hole.
