● **FIRST TEST POWER**

- As with all our products, we highly recommend that you power and test your LED XTREME product for full functionality before installing it.
- The LED XTREME Product Line runs off of a standard 12V battery which is not provided.
- Note: Recommended for off-road use only

● **MOUNT YOUR ROCK LIGHTS**

- See installation diagram example on back page.
- Double check that all connections are tight and secure.

● **ROUTE WIRES TO POWER SUPPLY**

- Plug rock lights into the CONTROLLER. the controller connects to the quick connect wire harness.
- Connect to power supply, bus bar, switch or battery (rocker or other switch recommended to prevent battery drain).
- Red connects to power and black connects to ground.
- Gorilla Whips offers wire extensions for bigger install projects & are available at www.gorillawhips.com.

● **TEST YOUR KIT FOR FULL FUNCTIONALITY**

- Once your LED XTREME Rock Lights have been properly connected to your power source, click the power button on your controller or app to test the LED XTREME lights for full functionality. Cycle through the various color options and mode settings to experience the awesomeness of the LED XTREME products.
- If your remote did not come pre-synced to the whip, disconnect from the power source. Connect back to the power source and within the first 5 seconds after plugging in the whip hold down the plus and minus speed buttons for 5-7 seconds to sync.
- You're now ready to light up the night sky... and everything else around. If you're looking to increase the LED awesomeness on your ATV or vehicle even more, try adding the XTREME Glow Kit . Just be careful... it is pretty awesome.

● **ENJOY THE RIDE!**

ROCK LIGHT KIT SPECIFICATIONS
