Maintenance and Storage

Use extreme care when disassembling and storing this greenhouse. Carefully remove the cover and fold it. Gently pull the frame tubes out of the connectors. Place all components into the original box or a plastic tote. Use caution when storing the cover; avoid placing it on or near the sharp edges of the frame components to prevent scratches and tears.

Repairing Rips and Tears

Although the greenhouse cover is relatively durable, it is still possible to puncture holes in the material if care is not taken when setting up, disassembling, and storing the greenhouse.

An adhesive polyurethane patching tape or sealant (not included) may be used for repairing punctures and tears in the cover. Before purchasing any repair tape or kit, please ensure it is suited for outdoor use and is waterproof. Apply as directed by the manufacturer.
