

## THERMOELECTRIC COOLER

COR12

### FEATURES

This thermoelectric unit is designed to be a portable storage container for cold drinks and cold food in "COLD" mode. The unit can chill to approximately 36°F/20°C below ambient temperature. The unit is powered by a 12 Volt DC system such as a vehicle, or can be powered from a house AC system.

### MODE SELECTION

**COLD** - Move the sliding switch to "COLD", the unit will cool and a green light will be on.  
**OFF** - Move the sliding switch to "OFF", the unit will be off.

### MAINTENANCE

- Keep cords and cigarette lighter sockets clean at all times. Small tobacco or dirt particles in the socket or the plug may affect performance.
- The motor, fan and control panel vents should be cleaned periodically. While the unit is unplugged, clean the fan blades and motor shaft using a paint brush or other soft bristled brush. Remove all hair, dirt, or dust that may have accumulated.
- To clean, wipe the inside with a warm damp cloth or sponge. Do not use harsh or abrasive cleaners. A mild soap should be sufficient, but if stains or odors remain, household bleach or baking soda may be added to the washing solution. Keep the lid open for several hours after cleaning to allow the interior to thoroughly dry and to prevent odors from forming in the cooler.
- For long periods of storage, a small container of baking soda or charcoal, placed inside, will eliminate objectionable odors.

### IMPORTANT NOTICE

- When using in the car, there will be a drain on the car battery if the engine is off.
- Ensure the fan is able to rotate at all times.
