## *Enhance Your Home with the Luxurious Depth and Texture of Wallcoverings*

by ELYSE GLICKMAN

Wallcoverings are making a major comeback as a great way to transform your walls and as an extension of your personality! And it's lightyears away from your grandmother's teacup-inspired wallpaper.

Los Angeles-based artist Brook Perdigrón's work creating custom textile collections commissioned by interior designers in Los Angeles, New York, and Paris led to the formation of her own design firm, **Brook Perdigrón Textiles**, in 2015. Although the business' services also include the procurement of custom fine art, internationally-sourced antique textiles, vintage furniture and accessories, her growing wallpaper line is a natural outgrowth of her textile work.

As she sees it, wallpaper never went out of fashion. However, she's observed that, over the past five to ten years, wallpaper has evolved from a background feature to more of a statement piece. Like Boland, she notes that due to advances in digital printing, many production limitations have been removed and more adventurous wallpaper has become easier to produce.

“Wallpaper is experiencing an ‘anything goes’ moment,” Perdigon says. “While I’m not seeing a specific trend, there are many more niche designs on the market. From exciting geometrics to painterly murals, to more soothing textural patterns, a designer can find anything to fit the space and mood they’re trying to create. This makes it an easy way to add both subtle and bold personality to a room. With painted walls, you only get the shock or subtlety of the color, not the personality of the motif. You can really create a design narrative with wallpaper.”

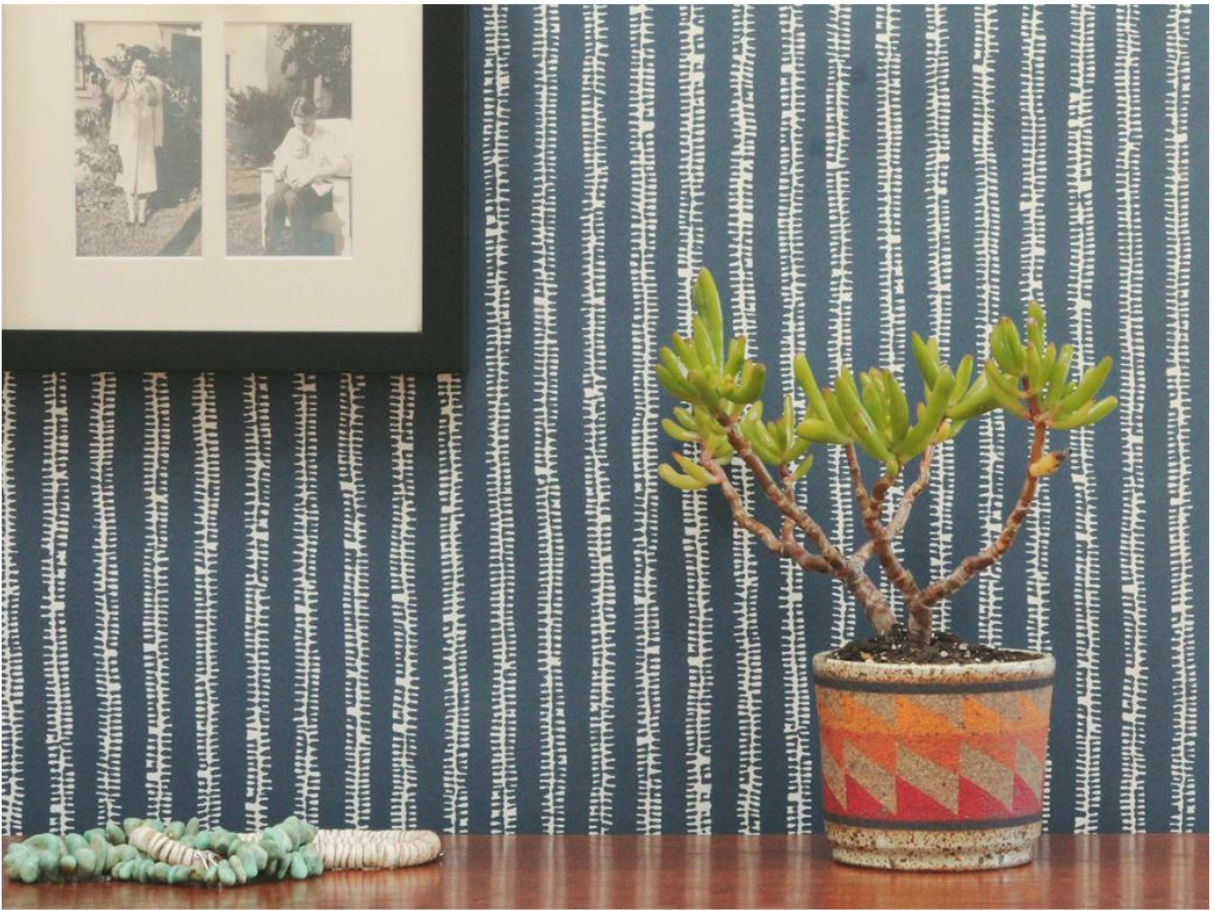

---

*"Depending on the room, wallpaper can be used to create a statement or add an extra dimension of texture."*

---

Perdigon believes that, in most cases, wallpaper should be used for an entire room rather than just one accent wall. “Depending on the room, wallpaper can be used to create a statement or add an extra dimension of texture,” she says.

For smaller spaces, she recommends a wallpaper with subtle personality; for larger spaces, like a master bedroom or living room, a great printed texture or grass cloth will add warmth and texture.

“Part of the joy of living with pattern is having it surround you and letting your eye wander,” she explains. “If you choose a wallpaper you really love, it’s a joy to have it envelop you.”
