HELP YOUR SCAR FADE

TO FEEL YOUR CONFIDENCE GROW

KELO-COTE®
SCAR TREATMENT

DO YOU HAVE AN UNWANTED SCAR?

If so, you are not alone, as they're extremely common. In fact, most people have a scar somewhere on their body.

KELO-COTE® Scar Treatment is clinically proven to help soften, flatten and smooth raised scars.

This advanced formula also reduces discolouration, redness and associated itching, pain and discomfort of scars, resulting from:

SURGERY

Hypertrophic scars can occur after surgery. KELO-COTE® has demonstrated effectiveness on raised and/or reddish coloured scars.¹

C-SECTIONS

A C-Section leaves a slightly raised puffy scar. If you are looking to treat a scar, a silicone gel such as KELO-COTE® can help.

BURNS

Severe burns can cause scarring. KELO-COTE® spray is useful for sensitive scars such as burns.

COSMETIC SURGERY

If you have had cosmetic surgery or are considering it. Speak to your surgeon about KELO-COTE®'s clinically proven formula.

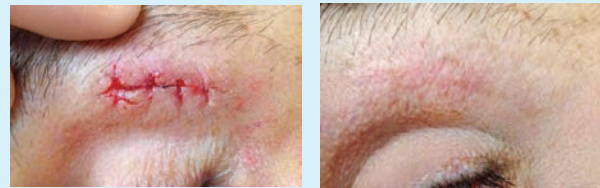

HOW DOES KELO-COTE® WORK?

KELO-COTE®'s patented silicone scar gel dries within four to five minutes* of application forming a breathable, waterproof sheet over the affected area which acts like an extra layer of skin.

This invisible silicone sheet binds the outer layer of dead skin cells to protect the underlying tissue against chemical, physical and microbial invasion of the scar.

The silicone sheet also provides an optimal healing environment for scars by hydrating and protecting the scar area and allowing collagen production to normalise and improve the appearance of scars.

Before using KELO-COTE® After using KELO-COTE®

CLINICAL EVIDENCE

KELO-COTE® is a topical scar product, with effectiveness demonstrated in over 10 published clinical studies. KELO-COTE® has been shown to help soften and flatten raised scars, and reduce redness or discolouration associated with them. More than 80% of patients and physicians rated the overall improvement of scar symptoms as either "very good" or "good" after using Kelo-Cote.¹

¹ Sepehrmanesh, M. (2006) Scar Management: Observational study of 1522 patients using Kelo-Cote® Silicone Gel. *Komp Dermatologie*. 1; 30-32.

HOW TO USE KELO-COTE®

Start treatment as soon as the wound is closed or stitches are removed. Ensure that the affected area is clean and dry.

Apply a very thin layer of KELO-COTE® onto the scar twice a day, do not rub in.

KELO-COTE® self-dries within 5 minutes* forming a flexible, waterproof, transparent layer.

Remove any excess product if it does not dry completely. Once dry, sunblock and cosmetics can be applied.

The recommended minimum treatment time is 60-90 days.

If improvement still occurs after 90 days, continued use is recommended.
