

## Preset Kit Compatibility Notes

Due to the nature of the 2Box “open sound architecture” and the differences between the 2Box DrumIt 5 MKI, MKII and DrumIt 3 stock instruments, the provided kit presets will only function correctly if you have the necessary *2Box instrument files* loaded to your module’s *SD card or internal memory*

This document contains the list of every 2Box instrument used for each provided kit preset. Some of these instruments do not come with the 2Box DrumIt 3 or DrumIt 5 MKI modules, or you may have previously deleted files from your DrumIt 5 MKII SD card.

However, you can download the full factory contents of the DrumIt 5 MKII module’s SD card from the links below. All of the stock 2Box .dsnd files used in the *PP13x7* kit presets are contained within these zip files and they can be installed to any of the 2Box DrumIt modules as required -

[DrumIt 5 MKII SD Card Content Part 1](#) (approx. 4.7 GB)

[DrumIt 5 MKII SD Card Content Part 2](#) (approx. 786 MB)

Some of these instruments (but not all) are also available to individually download from the [2Box Sounds page on their website](#).

### Notes:

*The above links to 2Box’s download pages are valid, functional and accurate at the time of writing. They are provided solely for your convenience. The eDrum Workshop can take no responsibility for any actions taken as a result of following the links or for the event that these links or the files alluded to become unavailable at any time.*

Different 2Box modules may use different folders for the same instruments but the 2Box module will scan the SD card/internal memory at startup to locate the correct instruments by their filename. Most instrument filenames are the same across all modules’ stock sounds so this should cause no issue with compatibility. However, a few sounds with different filenames have been identified and these may need to be renamed or duplicated with the correct filename to work. These files have been denoted with \* in the tables below.

If you do not wish to rename or duplicate these sounds, you can manually reassign them to the kit presets on the module or with the 2Box editor. You can then SAVE/overwrite the files on your SD card or module memory to store the changes if you wish. It is recommended to keep a backup of the original *.dkit* files on your computer in case they are needed in the future.

Kit: **PP13x7 A Natrl**

| Pad          | Instrument File   |
|--------------|-------------------|
| <b>KICK</b>  | GCM 22 Kick AF    |
| <b>SNARE</b> | PP13x7 A          |
