

BLOWETT

PREMIUM

A Premium Moisture Retention Agent

*A proven & safe solution
to save water on
irrigated premium turf.*

MAXIMISE WATER CAPTURE

RETAIN SOIL MOISTURE

REDUCE WATER USE

How it Works

BLOWETT Premium is a unique new formulation developed to fight the significant problems of hydrophobic soils in Western Australia, focusing on reducing the frequency of irrigation to combat the issues of water restrictions and lack of water resources.

BLOWETT Premium's proprietary blend of unique surfactants and humectants maximise plant available moisture whilst optimising plant safety for use on premium fine turf.

Simply put, BLOWETT Premium reduces the water required to maintain premium turf by increasing water capture at the soil surface to then maximise & extend soil moisture retention evenly around the root zone for longer periods.

*Increases water
penetration
in WA's
hydrophobic
soils*

Key Features

- » Quality surfactant and humectant formulation.
- » Protects against localised dry spot.
- » Limits the periods of water stress.
- » Can be introduced prior to periods of extreme heat to minimize plant heat stress.
- » Improves root zone moisture retention over an extended period.
- » Exceptional turf safety characteristics.
- » Can safely mix & spray with other components.
- » Safe & easy to apply without the need for high water volumes.

*Increases
water retention
throughout the
soil profile*

*Reduce water
use with
simple & safe
application*

MADE IN WA FOR WA SOILS

Proudly developed and manufactured in WA specifically for WA soils by the soil treatment experts at SACOA.
SACOA Pty Ltd. 1, 229 Stirling Hwy, Claremont WA 6010

- » Australian owned
- » Specialist company
- » QA manufacturing
- » National distribution
- » Full product support

BIOWETT

PREMIUM

MAXIMISE WATER CAPTURE

RETAIN SOIL MOISTURE

REDUCE WATER USE

ESSENTIAL DATA

Active Ingredient

- » Proprietary blend of polyethylene glycol / ethoxylated alcohol mixture

Pack Sizes

- » 20L, 200L, 1000L

Situation

- » Greens, fine turf, sports turf, fairways, lawns and landscapes.

Rates

- » 250-500ml per 100m²
- » 25 – 50L/Ha

Critical Comments

- » Apply in at least 400L water per hectare. Apply prior to rainfall/irrigation to maximise moisture utilisation.
- » Irrigate immediately following application when temperatures are expected to exceed 30°C within 24 hours of application.

Application Timing

- » Apply in early spring to defend against evaporation as soil temperatures rise. Follow up with applications in early summer & autumn.

Mixing

- » Can safely mix & spray with other components.

Safety Notes

- » Safe for use in public spaces.
- » Always read the product label before use.

WA Trials Prove Performance & Safety

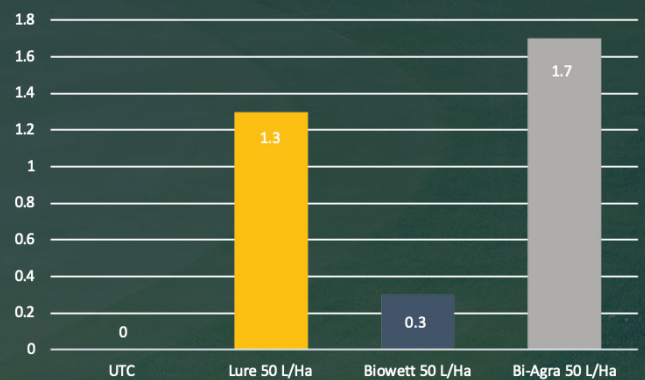

BIOWETT Premium's unique formulation of specialty surfactants and moisture retention agents has been proven over four years of WA turf trials to deliver superior greening and extended moisture retention. The WA trials also show that when applied correctly, the BIOWETT Premium formulation presents virtually no risk of grass burn.

PROVEN SAFETY

Alexander Park, WA 2016 - Mean Phytotoxicity Rating, 3 DAT.

BIOWETT Premium was tested against a number of other soil treatments on the market to assess its potential to cause plant burn ('phytotoxicity').

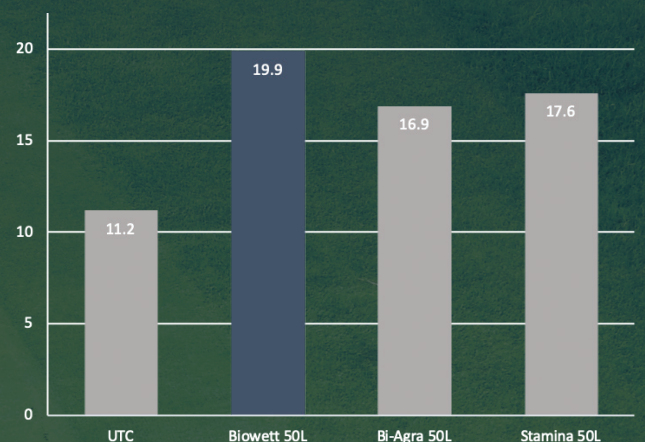

Notes: 0 = Nil, 1 = Slight, 2 = Moderate, 3 = Severe.

PROVEN PERFORMANCE

Ryrie Reserve, WA 2016 - Soil Moisture % (0-50mm) 5 Weeks After Treatment.

BIOWETT Premium was tested against leading soil treatments to assess turf greening and extended (five weeks) soil moisture retention.
