

**The Steadyrack Floor Rack is a simple yet stylish design that accommodates the bike's wheels – not the frame.**

**SUITABLE FOR: A wide variety of bikes.**

Designed as an alternative to conventional rails or other similar types of street parking which typically rely on the user resting the frame against the device, the Steadyrack Floor Rack ensures that there is no contact with the bike's frame or equipment thereby protecting the bike and minimising the risk of damage.

Loading bikes is as simple as rolling the front or rear wheel into the rack. Bikes fit snugly in our racks as the only contact point is with the rubber tyre. Once loaded bikes are secure and are not easily accidentally dislodged giving peace of mind to the users that their bikes are safe and secure. The racks can be anchored to the floor or pavement using tamper proof fixings and the looped locking arm allows users to lock their bikes to the rack using all kinds of conventional bike locks such as D-Locks.

Our racks offer more efficient parking than conventional rails and stands. These versatile racks can be arranged close together in an angled or side by side pattern and staggered to maximise the space available and offer users a far superior, more secure and protected parking option than conventional U Rails or other similar types of street bike parking.

**Approx. Dimensions**

Floor plates 150mm x 40mm • Bike stand 70mm wide  
Width 150mm • Length 455mm • Height 405mm
