HOW TO ORDER Hydraulic Hose Assemblies

Understanding Orientation Options

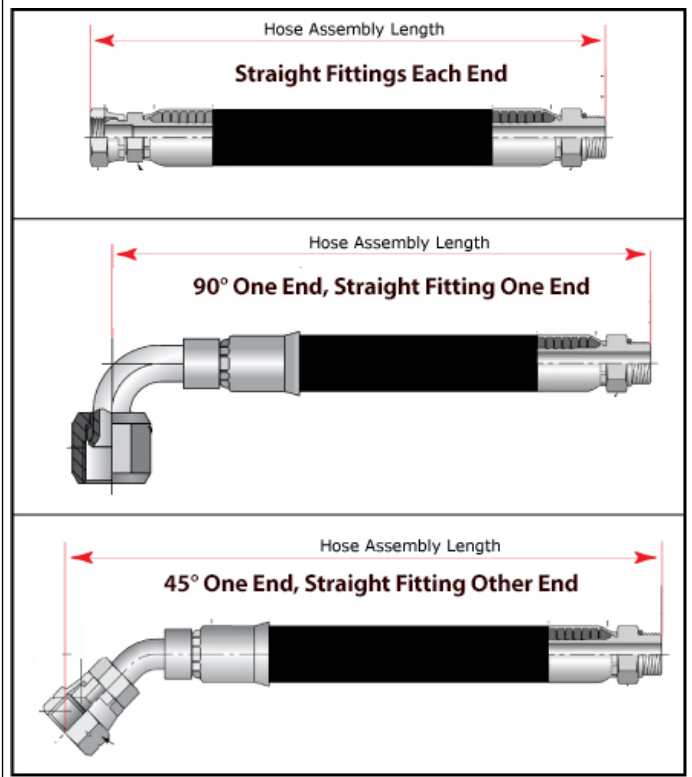

When you are assembling a hydraulic hose, you have a choice of end fittings that could be straight, 45°, 90° and other combinations.

Use this chart below to provide us the accurate orientation.

1. Hold the hose assembly as if you are looking into a telescope.
2. Position the elbow at the far end at 12 o'clock (straight up).
3. Identify the position of the closest fitting according to the examples below.

Hose Assembly Measurements

Hose Assembly Tolerance

For hose assembly tolerance either SAE or ISO standard may be referenced and used unless stated otherwise.

Assembly Length	Tolerance		
	Millimeters	Decimal Inches	Fractional Inches
Up to 36" (<914.4mm)	12.7 mm	0.5"	1/2 in
Over 36" (>914.4mm)	1% of Overall Length		

Please call our office before ordering, if you are unsure of something or have questions.
