Modular level sensor with adjustable indication level from minimum 180mm up to 560mm (860mm). The intervention point can be adjusted just by cutting the rod off to the required length and securing it with the push in fitting system. Can be fixed using flange with 2,3 or 6 holes and also with thread 1". Can also be used in fluids with ferrous particles because the magnet is at the top of the sensor and does not come into contact with the liquid.
