

# HYMENOPTHOR® Ant Bait Stations

**HYMENOPTHOR Ant Bait Stations** are economical and reusable bait feeders for ants. The unique *slide on/off mounting system* provides for fast inspection, refilling and cleaning. *Three selectable access holes* (knockouts) give you a choice of access for small and large species. *Ant ramps* provide a pathway for smaller ants from the lid to the bait.

The spring action lid holds itself open for easy cleaning and refilling. The discreet slimline shape helps to deflect impacts thereby reducing loss and damage. They are zip tie lockable and suitable for all liquid, gel, or granular baits.

## Directions for use:

1. Stick a square of double-sided tape to the **smooth** side of the mounting plate, peel off the cover then press firmly into position on or near ant trails. (Note: double-sided tape requires a clean, dry surface with a temperature range of 10° to 50° C).
2. Remove appropriate *knockouts* (easier if poked out from the inside). For small ants remove small round knockout/s. For larger ants remove the rectangular knockout.
3. Select an appropriate any bait and add it to the Station. Slide Station down onto the mounting plate until it is firm but not over tight. Place a little bait on the lid and leading to the Station. Use sufficient Stations for the job according to the product label.

**HYMENOPTHOR Ant Bait Stations** can also be used free standing, placed in garden beds, mounted on walls or fences, zip tied to branches, pipes etc.

Contents: 50x HYMENOPTHOR Ant Bait Stations, Mounting Plates, Zip Ties and Adhesive Tape Squares
