# ULTRATHOR<sup>™</sup>X – ADVANCED FLOW NEXT GENERATION PROTECTION

Since 2010, ULTRATHOR X has protected thousands of Australian homes and properties from the ravages of termites and other insect pests. The ULTRATHOR X difference lies in our exclusive **Advanced Flow Micro-suspension Formulation<sup>™</sup>** that provides improved flow characteristics to better penetrate the soil and create a more complete and continuous **Termite Defence Zone<sup>™</sup>**.

ULTRATHOR X has been tested and proven to provide improved soil penetration, which has resulted in a class-leading APVMA registered label that allows for rod injection with injection holes approved to be spaced up 350 mm apart in clay soils and 450 mm apart in other soil types.

## WHY THIS IS SO IMPORTANT

ULTRATHOR X's micro-fine particles flow further and more evenly through the soil, where they form the invisible, continuous **ULTRATHOR X** Termite Defence Zone. This will keep on protecting your home for up to eight years, or more.

The real benefit to you, from this improved flow profile of **ULTRATHOR X** arises since, during the application phase, it requires significantly less interference to your landscaping.

Most homes are surrounded by pavers or concrete pathways. The areas under these pathways are veritable termite highways, that must be treated to protect your home. This process usually requires drilling the pathways around your home and rod injecting the termiticide.

This becomes especially challenging when there are hot water heaters or air-conditioner units present. In such situations it remains vital that there are no gaps in your Termite Defence Zone. This is simply not possible with most termiticides.

**ULTRATHOR X** is different though, since it provides for holes to be spaced up to 350 - 450 mm apart, depending on the soil type, it makes it easy to protect these areas.

More commonly, if you have decorative tiles, the hole spacings of 150 - 200 mm on most termiticide labels mean the holes need to be drilled in the middle of these tiles. Even if this drilling doesn't crack the tiles, the tiles look unsightly with a big hole in the middle filled with concrete. This spoils the aesthetics of your home, in which you have invested so much time, love, and money.

Advanced Flow  
Micro-suspension  
Formulation™

The exceptional flow properties of **ULTRATHORX** ensures that injection holes can always be drilled in between the tiles and then simply grouted over, so they remain inconspicuous, leaving no reminder of the termite problem you once faced!

*And of course, fewer holes, means lower treatment costs too.*

## POWERED BY FIPRONIL

**ULTRATHOR X** is powered by Ensystem's low repellent fipronil. Fipronil performance that has been proven around the world, in all types of conditions, and in the most difficult-to-control situations. Under Australian conditions, results have been outstanding. These results have also been confirmed in extensive studies.

**ULTRATHOR X** provides fast elimination of the termites attacking your property together with highly effective, long-term residual termite control. With its unique mode of action, **ULTRATHOR X** provides proven protection against termite entry for up to 8 years or more.

*ULTRATHOR X is only available to licensed, professional pest control companies to ensure you get the best results.*

## HOW ULTRATHOR X PROTECTS YOUR HOME

The unique, micro-fine **ULTRATHOR X** solution flows rapidly and evenly through the soil before binding tightly, to provide long-term protection against termites. **ULTRATHOR X** is totally undetectable by the termites. This means the termites are completely unaware of its presence in the soil and will readily pass into the **ULTRATHOR X Termite Defence Zone**. This ensures fast elimination of these marauding termites and long-term residual protection of your home. In fact, **ULTRATHOR X** is proven to provide up to eight years protection against termites.

The **ULTRATHOR X Viral Transfer Effect™** enables the active component in **ULTRATHOR X**, fipronil, to pass from one termite to another. So, even termites that have not passed through the **ULTRATHOR X** Termite Defence Zone become infected. Just like a virus is spread through the internet, **ULTRATHOR X** is spread through the termite colony, eliminating termites.

With **ULTRATHOR X** dispersing more evenly through the soil, it fully meets the requirements of the Australian Standard Series AS 3660: Termite Management, which expects a horizontal Termite Defence Zone to be complete and continuous down to a depth of 80 mm.

**ULTRATHOR X** creates a Termite Defence Zone around your home. Since termites are unable to detect the presence of this Defence Zone, they readily enter into it.

When the termites enter the Defence Zone they accumulate **ULTRATHOR X** on the outside of their bodies. **ULTRATHOR X** is designed so it does not kill immediately...

...the slight delay in the killing effect allows contaminated termites just enough time to interact and infect non-exposed termite nestmates through social grooming.

This is how **ULTRATHOR X** provides both direct and indirect kill of termites to better protect your home.

**ULTRATHOR X VIRAL EFFECT**

# PROTECT YOUR HOME FROM TERMITES.

## INSIST ON ULTRATHOR™ ADVANCED FLOW

### 450 mm

FEWER HOLES... EASILY GET  
AROUND ALL THE OBSTACLES &  
IN BETWEEN TILES.

### HELP MAKE SURE THEY DON'T COME BACK

1

Make sure you agree to your Professional Pest Manager conducting a thorough inspection of your home and garden at least every 12 months, (more frequently in high-risk situations).

2

Keep all sub-floor areas clean, dry, and well ventilated where possible.

3

Fix up leaking plumbing e.g., downpipes, gutters, and taps, and make sure there is good drainage around your home.

4

DO NOT build up soil, mulch, or garden beds against the walls of your home.

5

DO NOT store timber or cellulose-based materials underneath or against the walls of your home.

# ULTRATHOR<sup>™</sup>X

## ULTRATHOR X KILLS whatever else is bugging you too!

**ULTRATHOR X** is the **only fipronil-based product in the market** that has an APVMA (Australian Pesticides & Veterinary Medicines Authority) **approval for control of ALL species of crawling insects together with rod injection spacings at up to 450 mm. SO, ONE PRODUCT, ULTRATHOR X, DOES IT ALL!**

**ULTRATHOR X** provides you and your professional pest manager with a new realm of security, flexibility, and reassurance.

With an **ULTRATHOR X Termite Defence Zone** in place, you can sleep easy knowing that you have

More complete protection.

Less unsightly effects together with better protection around challenging areas like hot water heaters and air-conditioners.

Termite Protection that will last for up to eight years, or more.
