

Congratulations on owning your new Wolfard Oil lamp. Each lamp is proudly hand-blown by highly skilled craftsmen and women in California's Wine Country region for 50 years. The original American design represents the very finest in craftsmanship and materials. By following these few tips, you'll be able to get maximum enjoyment from your lamp for years and years to come.

Filling: The Classic Wolfard Oil Lamp is intelligently designed to be filled through the tube connecting the reservoir to the chimney. Using our custom designed Wolfard Filler Spout (sold separately), simply attach the filler spout to your Wolfard Lamp Oil bottle, insert the flexible tip of the filler spout into the opening in the side of the lamp, and then fill the fuel reservoir 2/3rds full. Remove the spout and insert the wick and wickholder into the reservoir (see below for how to adjust wick). Other methods include using our flexible Wolfard Funnel to easily fill with more flexibility, or using a conventional funnel while filling through the wick hole on the inside reservoir.

Lighting: The easiest way to light your Wolfard Lamp is with a long-tip butane fireplace lighter or a long fireplace match. Avoid tilting the lamp during lighting, since this could cause fuel to spill.

Adjusting the Flame: When properly adjusted, your flame should be just about the size and intensity of a candle's. You can adjust the flame by raising or lowering the wick in its glass holder - but be sure to let the wick, wick holder and reservoir cool down before touching!

The top of the wick should be just below the lip of the glass wick holder. If any part of the wick, including threads or frays, protrudes from the top of the holder, your lamp may smoke. During initial use, or when refilling, watch the lamp for 15 minutes to make sure it doesn't smoke. If it does, blow out the flame, allow the lamp to cool, remove the wick holder from the lamp and pull the wick lower down into its holder.

Choosing Lamp Oil: We recommend Wolfard Lamp Oil because of its clean-burning and odorless qualities. Do not use kerosene or cheap lamp oils, since they tend to smoke and have strong odors. Do not use solvents or fuels with lower ignition points than kerosene – such as alcohol, gasoline, paint thinner, or acetone - these are unsafe!

Cleaning: Because it's made from the finest heat-resistant glass available, your Wolfard Lamp is rugged enough to be cleaned in the dishwasher. For best results, swirl soap and water in the reservoir before placing your lamp upside down so the reservoir can drain. Just remember that any object made of glass isn't indestructible, so treat your lamp with reasonable care.

Burn Time: The following table tells you approximately how long your lamp should burn between refills (since each Wolfard Lamp is hand-blown, burning times may vary just slightly).

<u>Lamp Size</u>	<u>Wick Length</u>	<u>Fuel Capacity</u>	<u>Approximate Burn Time</u>
6"	2"	1 ½ oz.	12 hours
9"	2.5"	4 oz.	27 hours
12"	2.75"	6 oz.	40 hours
15"	3"	8 oz.	60 hours

ALWAYS keep out of reach of children whether lit or not.

NEVER leave any device unattended while lit.
