

# Warthog 850 GPM Floating Pump

## **Start up instructions**

1. Add 1 Liter of 80W90 Gear Oil into gear casing
2. Make sure the Gear casing threaded cap is tightened securely
3. Add 1 Quart of Full Synthetic 30W Motor Oil
4. Add Unleaded Gasoline to the Motor tank
5. Choke the engine, start up and let it run for 2-3 minutes then follow step 6.
6. **(FIRST USE ONLY) IMPORTANT\*\*\***  
Shut off engine, as the engine dies down pull the pull cord 3-5 times as the propeller slows down. (this will keep the propeller from adhering to the housing.
7. You are now ready to run your warthog pump. Please check oil levels every time you refuel your unit.
