

VEGA LITE COLOUR

5000 lumen cabled LED work light with 3 colour temperature settings

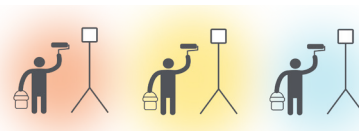

This new lamp has been developed especially for house painters or other professional craftsmen working on surface preparation, such as filling, wallpapering, and sanding. The powerful LEDs provide a diffused and pleasant, non-blinding, uniform work light, with a large dispersion, and the 3 different colour temperature settings allow you to select exactly the colour temperature that suits the work situation best and is most comfortable to work with, depending on the colour of the surface. Switch between warm (2500 Kelvin), medium (4500 Kelvin) and cold light (6500 Kelvin). This functionality is also useful for other indoor tasks, like setting up tiles, ceilings, floors, etc., in the construction industry.

VEGA LITE COLOUR is typically mounted on a tripod and fits both the 2m lightweight tripod and the heavier 3m tripod, but can of course also be used alone, where the light direction can be adjusted flexibly, with the integrated support stand and carrying handle.

The robust housing of the VEGA LITE COLOUR is made of a highly shock-resistant plastic material, perfect for the working environment and since the LEDs do not produce heat, there is no fire hazard when using the floodlight. With the two built-in power outlets on the backside, you can conveniently and quickly add more lamps or other equipment without using additional cabling – quick and easy.
