

Quick Release Belt

FatStick have chosen to add a basic Quick Release Belt to all of its inflatable paddle boards made in 2021. This belt is of basic design and therefore, should you wish to take part in activities such as Racing or White Water SUP, you will need to purchase a more specialist belt.

FatStick recommend that all riders use a quick release belt on any 'flowing' body of water, such as rivers, estuary channels, canals and weirs.

The standard ankle leash is perfectly usable and safe for open lakes and on the sea, and as such, the choice of which leash to wear is yours.

Ankle leashes can be unsafe on flowing bodies of water as they can become entangled with objects below the waters surface. If this should happen, it is extremely difficult/impossible to remove an ankle leash.

Pull ball to release buckle

Quick Release Belt

IMPORTANT PLEASE READ BEFORE USING THE QUICK RELEASE BELT. DO NOT USE WITHOUT OPERATING FIRST.

- To use your QR belt simply attach your Ankle Leash to the webbing on the rear of the belt and then strap the Belt around your waist
- Practice using the belt on dry land first to understand how to operate.
- This belt is made to be worn around the waist only. Improper use could cause injury or death.
- Always be sure that the buckle and toggle are within easy reach, best placed facing forwards. DO NOT tuck the Quick Release toggle out of the way.
- Do not tuck in/secure the excess belt once it has been passed through the buckle. By doing this you will render the Quick Release aspect of the belt useless.
- This belt is not recommended for White Water SUPing. You will require specialist equipment for that activity.
