

TECHNICAL DATA SHEET

Multi-Purpose Lubricant Spray with PTFE

Moisture Displacer/General Lubricant

Multi-Purpose Lubricant Spray combats the problem of water and steam in all electrical components.

Multi-Purpose Lubricant Spray is a blend of penetrants, moisture displacers, de-watering agents and rust inhibitors, designed to enable the restoration of power quickly safely and efficiently. Its low viscosity allows the product to penetrate rusted components quickly and the lubricity additives coat the surfaces to prevent further rusting and seizing.

Multi-Purpose Lubricant Spray will penetrate water and deposit a moisture barrier, which will help to protect and seal out moisture.

Multi-Purpose Lubricant Spray is safe to use on any electrical components such as starters, alternators, electrical motors, switch gear, high and low tension cables. (Electrical circuits should be switched off during application, and until the solvent has evaporated).

Physical and Chemical Properties

Aerosol

Odour Organic solvents

Flash Point < -40°C

Auto Ignition Temperature 410 – 580°C

Flammability Limit Lower 1.8% Upper 9.5%

Information given concerns the major ingredients

Directions

1. Shake can well.
2. Spray onto selected area.
3. Allow to penetrate.

Product availability

400ml aerosol
