

CONNECTING TOWBAR AND WIRING SYSTEMS HAS NEVER BEEN EASIER

Introducing the smarter way to connect towbar and trailer wiring systems – SmartClick™ by Hayman Reese.

As vehicle computer and electronics systems become more sophisticated, connecting aftermarket add-on's such as towbar wiring tails, brake controllers and power harnesses is becoming increasingly difficult.

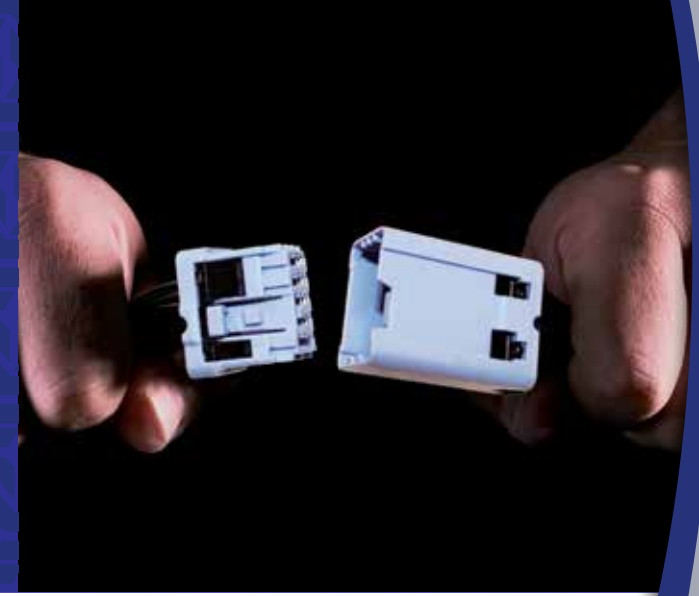

Hayman Reese's SmartClick™ wiring is a revolutionary system that makes use of existing connection points to connect aftermarket wiring applications. No longer do you need to locate, scotch-lock or solder wires and risk interfering with or damaging existing systems.

With SmartClick™ wiring simply plug... and play!

SmartClick™ wiring looms

Each new Hayman Reese towbar comes with a SmartClick™ wiring loom that patches into existing connection points in the rear of the vehicle – usually behind the rear lights. Think of the looms as adaptors that have been designed specifically to fit each vehicle and interpret electrical messages being sent to and from the caravan or trailer.

If the vehicle has a particularly complicated computer system, an additional Electronic Control Unit (ECU) is connected to the loom that seamlessly handles all communications between the vehicle and caravan or trailer.

The looms provide the connection point that SmartClick™ compatible wiring tails and accessories plug in to.

Click... and you're done

SmartClick™ wiring is a modular system meaning that in addition to connecting your towbar wiring tail and plug, you can connect other compatible accessories such as Brake Controllers, Brake Controller Harnesses and Power Harnesses. Each compatible accessory is designed to work with others in the range so not only do they seamlessly work together, there's minimal risk of interfering with or damaging vehicle electronics.

Don't have a SmartClick™ wiring loom on your vehicle? Don't worry, you can still connect a SmartClick™ compatible accessory to your vehicle. We do however recommend you get it installed by certified auto electrician.

Compatible wiring tails and accessories:

- 400mm, 1200mm and 1800mm wiring tails
- 7 pin and 12 pin plugs, in both round and flat configurations
- Brake controllers and brake control harnesses
- Power harnesses
